Fibres to Smart Textiles Asis Patnaik, Sweta Patnaik, 2019-08-08 *Fibres to Smart Textiles: Advances in Manufacturing Technologies and Applications* offers comprehensive coverage of the fundamentals and advances in the textile and clothing manufacturing sectors. It describes the basics of fibres, yarns and fabrics and their end use in the latest developments and applications in the field and addresses environmental impacts from textile processes and how to minimize them. This book serves as a single comprehensive source discussing textile fibres, yarn formation, filament formation, techniques, woven fabric formation, knitting technologies, nonwoven manufacturing technologies, braiding technologies and dyeing, printing and finishing processes. Testing of textile materials, environmental impacts of textile processes and use of CAD and CAM in designing textile products are also included. The book also discusses applications including textile composites and biocomposites, technical textiles, smart textiles and nanotextiles. With chapters authored by textile experts, this practical book offers guidance to professionals in textile and clothing manufacturing and shows how to avoid potential pitfalls in product development.

Mechanics of Fiber and Textile Reinforced Cement Composites Barzin Mobasher, 2011-09-20 Among all building materials, concrete is the most commonly used and there is a staggering demand for it. However, as we strive to build taller structures with improved seismic resistance or durable pavement with an indefinite service life, we require materials with better performance than the conventional materials used today. Considering the enormous investment in public infrastructure and society's need to sustain it, the need for new and innovative materials for the repair and rehabilitation of civil infrastructure becomes more evident. These improved properties may be defined in terms of carbon footprint, life cycle cost, durability, corrosion resistance, strength, ductility and stiffness. Addressing recent trends and future directions, *Mechanics of Fiber and Textile Reinforced Cement Composites* presents new opportunities for developing innovative and cost effective materials and techniques in cement and concrete composites manufacturing, testing and design.

The book offers mathematical models experimental results and computational algorithms for efficient designs with fiber and textile reinforced composite systems It explores alternative solutions using blended cements innovative reinforcing systems natural fibers experimental characterization of key parameters used for design and optimized designs Each chapter begins with a detailed introduction supplies a thorough overview of the existing literature and sets forth the reasoning behind the experimentation and theory Documenting the composite action of fibers and textiles the book develops and explains methods for manufacturing and testing cement composites Methods to design and analyze structures for reduced weight increased durability and minimization of cement use are also examined The book demonstrates that using a higher volume fraction of fiber systems can result in composites that are quasi elastic plastic Speaking to the need to optimize structural performance and sustainability in construction this comprehensive and cohesive reference requires readers to rethink the traditional design and manufacturing of reinforced concrete structures
