Proceedings Of The Fifth West Coast Conference On Formal Linguistics:

The Proceedings of the 27th Annual Child Language Research Forum Eve V. Clark, 1995 Since its inception in 1967 the Forum has provided an informal but critical setting for the presentation of new ideas and research on first language acquisition The Forum itself is sponsored by the Linguistics Department at Stanford and is organised by graduate students In this volume the contributors explore their findings in language acquisition in a variety of the world's languages The papers presented here reflect the diversity of interests in the field and the range of languages being studied This volume makes an empirical as well as a theoretical contribution to linguistic research *Proceedings of the West Coast Conference on Formal*

Linguistics Mary Dalrymple, Jeffery Goldberg, Kristin Hanson, Michael Inman, 1986-01 **Situation Theory and Its Applications: Volume 3** Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried The Linguistics of Punctuation Geoffrey Nunberg, 1990-09 Geoffrey Nunberg challenges a widespread assumption that the linguistic structure of written languages is qualitatively identical to that of spoken language It should no longer be necessary to defend the view that written language is truly language but it is surprising to learn of written language category indicators that are realized by punctuation marks and other figural devices He shows that traditional approaches to these devices tend to describe the features of written language exclusively by analogy to those of spoken language with the result that punctuation has been regarded as an unsystematic and deficient means for presenting spoken language intonation Analysed in its own terms however punctuation manifests a coherent linguistic subsystem of text grammar that coexists in writing with the system of lexical grammar that has been the traditional object of linguistic inquiry A detailed analysis of the category structure of English text sentences reveals a highly systematic set of syntactic and presentational rules that can be described in terms independent of the rules of lexical grammar and are largely matters of the tacit knowledge that writers acquire without formal instruction That these rules obey constraints that are structurally analogous to those of lexical grammar leads Nunberg to label the text grammar an application of the principles of natural language organization to a new domain Geoffrey Nunberg is a researcher at Xerox Palo Alto Research Center *Computational Models of American Speech* Mary Margaret Withgott, Francine R. Chen, 1993-03 A new perspective on phonetic variation is achieved in this volume through the construction of a series of models of spoken American English In the past computer theorists and programmers investigating pronunciation have often relied on their own knowledge of the

language or on limited transcription data Speech recognition researchers on the other hand have drawn on a great deal of data but without examining in detail the information about pronunciation the data contains The authors combine the best of each approach to develop probabilistic and rule based computational models of transcription data An ongoing controversy in studies of phonetic variation is the existence and proper definition of a phonetic unit The authors argue that assumptions about the units of spoken language are critical to a computational model Their computational models employ suprasegmental elements such as syllable boundaries stress and position in a unit called a metrical foot The use of such elements in modeling data enables the creation of better computational models for both recognition and synthesis technology This book should be of interest to speech engineers linguists and anyone who wishes to understand symbolic systems of communication

Situation Theory and Its Applications: Volume 2 Robin Cooper, Jon Barwise, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science AI linguistics logic philosophy and mathematics the theory is forging a common set of tools for the analysis of phenomena from all these fields This volume presents work that evolved out of the Second Conference on Situation Theory and its Applications Twenty six essays exhibit the wide range of the theory covering such topics as natural language semantics philosophical issues about information mathematical applications and the visual representation of information in computer systems Jon Barwise is a professor of philosophy mathematics and logic at Indiana University in Bloomington Jean Mark Gawron is a researcher at SRI International and a consultant at Hewlett Packard Laboratories Gordon Plotkin is a professor of theoretical computer science at the University of Edinburgh Syun Tutiya is in the philosophy department at Chiba University in Japan

Formal Issues in Lexical-Functional Grammar Mary Dalrymple, 1995-11-24 Lexical Functional Grammar was first developed by Joan Bresnan and Ronald M Kaplan in the late 1970s and was designed to serve as a medium for expressing and explaining important generalisations about the syntax of human languages and thus to serve as a vehicle for independent linguistic research An equally important goal was to provide a restricted mathematically tractable notation that could be interpreted by psychologically plausible and computationally efficient processing mechanisms The formal architecture of LFG provides a simple set of devices for describing the common properties of all human languages and the particular properties of individual languages This volume presents work conducted over the past several years at the Xerox Palo Alto Research Center Stanford University and elsewhere The different sections link mathematical and computational issues and the analysis of particular linguistic phenomena in areas such as wh constructions anaphoric binding word order and coordination

Situation Theory and Its Applications: Volume 1 Robin Cooper, Kuniaki Mukai, John Perry, Center for the Study of Language and Information (U.S.), 1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise s intuition was that Claire didn t just see Jon an individual but Jon doing something a situation Situations

are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entities such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory *Literature and Cognition* Jerry R. Hobbs,1990-09-30 Cognitive science with its guiding metaphor of the mind as a computer has made substantial progress towards an understanding of how people comprehend and produce discourse The essays in this book apply these insights to problems in the interpretation of literature The first two chapters present the outline of a cognitive theory of discourse and use it to shed light on some classic issues in literary theory including the roles of the author's intention and the reader's brief systems in the meaning of a literary work The next three chapters are more technical investigations of discourse interpretation metaphor and discourse coherence The framework developed is then used in the examination of two literary works a sonnet by Milton and the novella *Sylvie* by Gérard de Nerval Partition and Quantity Jing Jin,2018-06-27 Partition and Quantity Numeral Classifiers Measurement and Partitive Constructions in Mandarin Chinese presents an in depth investigation into the semantic and syntactic properties of Chinese classifiers and conducts a comprehensive examination on the use of different quantity constructions in Chinese This book echoes a rapid development in the past decades in Chinese linguistics research within the generative framework on Chinese classifier phrases an area that has emerged as one of the most cutting edge themes in the field of Chinese linguistics The book on the one hand offers a closer scrutiny on empirical data and revisits some long lasting research problems such as the semantic factor bearing on the formation of Chinese numeral classifier constructions the non licensing of the linker *de* in between the numeral classifier and the noun and the conditions regulating the use of pre classifier adjectives On the other hand particular attention is paid to the issues that have been less studied or gone unnoticed in previous studies including a more fine grained subcategorization of Chinese measurement constructions the multiple grammatical roles played by the marker *de* in different numeral classifier constructions the formation and derivation of Chinese partitive constructions etc **What Counts** Elena Herburger,2000-10-10 In *What Counts* Elena Herburger considers the effects of focus on interpretation She investigates how focus affects the pragmatics and truth conditions of a sentence by rearranging its quantificational structure Adopting a neo Davidsonian stance Herburger claims that various pragmatic and truth conditional effects of focus sustain a uniform explanation if focus is viewed as imposing structure on otherwise unrestricted quantification Phenomena discussed include free focus the interaction between focus and negation the quantificational structure of adverbs of quantification the semantics of *only* and *even* and the differences between weak and strong determiners One of Herburger's aims is to show that a simple semantics without reliance on such notions as semantic presupposition can account for the truth conditional

and pragmatic effects of focus The book will be of interest to anyone exploring the syntax semantics interface and current theories of quantification Linguistic Inquiry Monograph No 36 *The Cambridge Handbook of Experimental Syntax* Grant Goodall,2021-12-09 The first of its kind this Handbook provides an in depth overview of all current issues and trends in experimental syntax **The Acquisition of Turkish in Childhood** Belma Haznedar,F. Nihan Ketrez,2016-11-18 The Acquisition of Turkish in Childhood presents recent research on the nature of language acquisition by typically and atypically developing monolingual and bilingual Turkish speaking children The book summarises the most recent research findings on the acquisition of Turkish in childhood with a focus on i the acquisition of phonology morphology syntax and semantics ii the acquisition of discourse skills iii literacy development and iv atypical vs typical development The book also provides the reader with a unique perspective on cross learner comparative research on the acquisition of Turkish demonstrating how similar issues can be investigated in a range of various acquisition contexts By grouping together the recent research on the acquisition of Turkish within a single volume this book provides a unique opportunity for readers to review the general developmental tendencies and the most prominent hypotheses put forward by scholars **Things and Stuff** Tibor Kiss,Francis Jeffry Pelletier,Halima Husić,2021-06-10 A classical viewpoint claims that reality consists of both things and stuff and that we need a way to discuss these aspects of reality This is achieved by using count terms to talk about things while using mass terms to talk about stuff Bringing together contributions from internationally renowned experts across interrelated disciplines this book explores the relationship between mass and count nouns in a number of syntactic environments and across a range of languages It both explains how languages differ in their methods for describing these two fundamental categories of reality and shows the many ways that modern linguistics looks to describe them It also explores how the notions of count and mass apply to abstract nouns adding a new dimension to the countability discussion With its pioneering approach to the fundamental questions surrounding mass count distinction this book will be essential reading for researchers in formal semantics and linguistic typology Partitives Jacob Hoeksema,2011-07-19 No detailed description available for Partitives The Gift of Knowledge / Ttnúwit Átawish Nch'inch'imamí Virginia R.
