software industry communities towards techniques methods and tools that permit to manage system performance concerns as an integral part of software engineering Model based software performance analysis introduces performance concerns in the scope of software modeling thus allowing the developer to carry on performance analysis throughout the software lifecycle With this book Cortellessa Di Marco and Inverardi provide the cross knowledge that allows developers to tackle software performance issues from the very early phases of software development They explain the basic concepts of performance analysis and describe the most representative methodologies used to annotate and transform software models into performance models To this end they go all the way from performance primers through software and performance modeling notations to the latest transformation based methodologies As a result their book is a self contained reference text on software performance engineering from which different target groups will benefit professional software engineers and graduate students in software engineering will learn both basic concepts of performance modeling and new methodologies while performance specialists will find out how to investigate software performance model building **Performance Tools** and Applications to Networked Systems Maria Carla Calzarossa, 2004-04-22 This book presents revised versions of tutorial lectures given at the IEEE CS Symposium on modeling analysis and simulation of computer and telecommunication systems held in Orlando FL USA in October 2003 The lectures are grouped into three parts on performance and QoS of modern wired and wireless networks current advances in performance modeling and simulation and other specific applications of these methodologies This tutorial book is targeted to both practitioners and researchers The practitioner will benefit from numerous pointers to performance and QoS issues the pedagogical style and plenty of references will be of great use in solving practical problems The researcher and advanced student are offered a representative set of topics not only for their research value but also for their novelty and use in identifying areas of active research Performance and QoS of Next Generation Networking Kunio Goto, Toshiharu Hasegawa, Hideaki Takagi, Yutaka Takahashi, 2012-12-06 The advancement of key technologies in communication such as optical and radio transmission coding schemes switching mechanisms etc has meant that communication networks are quickly growing to a larger scale and higher speed than was ever anticipated In terms of usage Internet and real time applications are expected to share a significant portion of the bandwidth in the next generation of communication networks Therefore in order to achieve seamless and Quality of Service QoS guaranteed transmission regardless of source characteristics extensive research into networking technologies is es sential For the proper design development and operation of emerging ideas on networking further studies on the performance modeling and evaluation of networking are also encouraged The International Conference on the Performance and QoS of Next Gen eration Networking P 1988 1991 and 1994 in Kyoto 1997 in Tsukuba The confer ence is sponsored by the International Federation of Information Processing IFIP Working Group WG 6 3 Performance of Communication Systems 6 4 High Performance Networking and 7 3 Computer System Modelling Fi nancial supports are given by Commemorative
