Recent Developments in Decision Support Systems Clyde W. Holsapple, Andrew B. Whinston, 2013-06-29 Over the past two decades many advances have been made in the decision support system DSS field They range from progress in fundamental concepts to improved techniques and methods to widespread use of commercial software for DSS development Still the depth and breadth of the DSS field continues to grow fueled by the need to better support decision making in a world that is increasingly complex in terms of volume diversity and interconnectedness of the knowledge on which decisions can be based This continuing growth is facilitated by increasing computer power and decreasing per unit computing costs But it is spearheaded by the multifaceted efforts of DSS researchers The collective work of these researchers runs from the speculative to the normative to the descriptive It includes analysis of what the field needs designs of means for meeting recognized needs and implementations for study It encompasses theoretical empirical and applied orientations It is concerned with the invention of concepts frameworks models and languages for giving varied helpful perspectives It involves the discovery of principles methods and techniques for expeditious construction of successful DSSs It aims to create computer based tools that facilitate DSS development It assesses DSS efficacy by observing systems their developers and their users This growing body of research continues to be fleshed out and take shape on a strong but still developing skeletal foundation *Hawaii International Conference on System Sciences, 23rd* IEEE Computer Society Press, Training Publications Limited, 1990 *Proceedings of the Twenty-first Annual Hawaii International Conference on System Sciences, Kailua-Kona, Hawaii, 5-8 January 1988*, 1988 *Recommender Systems Handbook* Francesco Ricci, Lior Rokach, Bracha Shapira, Paul B. Kantor, 2010-10-21 The explosive growth of e commerce and online environments has made the issue of information search and selection increasingly serious users are overloaded by options to consider and they may not have the time or knowledge to personally evaluate these options Recommender systems have proven to be a valuable way for online users to cope with the information overload and have become one of the most powerful and popular tools in electronic

commerce Correspondingly various techniques for recommendation generation have been proposed During the last decade many of them have also been successfully deployed in commercial environments Recommender Systems Handbook an edited volume is a multi disciplinary effort that involves world wide experts from diverse fields such as artificial intelligence human computer interaction information technology data mining statistics adaptive user interfaces decision support systems marketing and consumer behavior Theoreticians and practitioners from these fields continually seek techniques for more efficient cost effective and accurate recommender systems This handbook aims to impose a degree of order on this diversity by presenting a coherent and unified repository of recommender systems major concepts theories methodologies trends challenges and applications Extensive artificial applications a variety of real world applications and detailed case studies are included Recommender Systems Handbook illustrates how this technology can support the user in decision making planning and purchasing processes It works for well known corporations such as Amazon Google Microsoft and AT T This handbook is suitable for researchers and advanced level students in computer science as a reference

ICT - Energy Concepts for Energy Efficiency and Sustainability Giorgos Fagas, Luca Gammaitoni, John P. Gallagher, Douglas Paul, 2017-03-22 In a previous volume ICT Energy Concepts Towards Zero Power ICT referenced below as Vol 1 we addressed some of the fundamentals related to bridging the gap between the amount of energy required to operate portable mobile ICT systems and the amount of energy available from ambient sources The only viable solution appears to be to attack the gap from both sides i e to reduce the amount of energy dissipated during computation and to improve the efficiency in energy harvesting technologies In this book we build on those concepts and continue the discussion on energy efficiency and sustainability by addressing the minimisation of energy consumption at different levels across the ICT system stack from hardware to software as well as discussing energy consumption issues in high performance computing HPC data centres and communication in sensor networks This book was realised thanks to the contribution of the project Coordinating Research Efforts of the ICT Energy Community funded from the European Union under the Future and Emerging Technologies FET area of the Seventh Framework Programme for Research and Technological Development grant agreement n 611004
