Ungemach,2012-12-06 The first crisis in energy prices was undoubtedly a strong stimulus for the involvement of the Commission of the European Communities in research and development on alternative energy sources Indeed the need to overcome difficulties faced by the Community as a whole particularly those resulting from its severely unbalanced energy supply made a common Community approach seem especially apt This reasoning also applies to energy R to show how the Community research programme fits into the overall context of national and international research on geothermal energy by including the presentations of six guest speakers who introduced the sessions and gave keynote addresses **Books in**

Abé,S. Hirakawa,2012-12-06 Hydraulic fracturing has been and continues to be a major techno logical tool in oil and gas recovery nuclear and other waste disposal

mining and particularly in situ coal gasification and more recently in geothermal heat recovery particularly extracting heat from hot dry rock masses The understanding of the fracture process under the action of pressurized fluid at various temperatures is of fundamental scientific importance which requires an adequate description of thermomechanical properties of subsurface rock fluid solid interaction effects as well as degradation of the host rock due to temperature gradients introduced by heat extraction Considerable progress has been made over the past several years in laboratory experiments analytical and numerical modeling and in situ field studies in various aspects of hydraulic fracturing and geothermal energy extraction by researchers in the United States and Japan and also elsewhere However the results have been scattered throughout the literature Therefore the time seemed ripe for bringing together selected researchers from the two countries as well as observers from other countries in order to survey the state of the art exchange scientific information and establish closer collaboration for further better coordinated scientific effort in this important area of research and exploration
