Process Analytical Technology for the Food Industry Colm P. O'Donnell, Colette Fagan, P.J. Cullen, 2014-11-03 The Process Analytical Technology PAT initiative aims to move from a paradigm of testing quality in to building quality in by design It can be defined as the optimal application of process analytical technologies feedback process control strategies information management tools and or product process optimization strategies Recently there have been significant advances in process sensors and in model based monitoring and control methodologies leading to enormous opportunities for improved performance of food manufacturing processes and for the quality of food products with the adoption of PAT Improvements in process efficiency reduced product variability enhanced traceability process understanding and decreased risk of contamination are some of the benefits arising from the introduction of a PAT strategy in the food industry Process Analytical Technology for the Food Industry reviews established and emerging PAT tools with potential application within the food processing industry The book will also serve as a reference for industry researchers educators and students by providing a comprehensive insight into the objectives challenges and benefits of adopting a Process Analytical Technology strategy in the food industry

Process Analytical Technology in Biopharmaceutical Manufacturing Samuel Thomas Cosby,Sloan School of Management,Massachusetts Institute of Technology. Department of Chemical Engineering,Leaders for Global Operations Program,2013 Process Analytical Technology PAT became a well defined concept within the pharmaceutical industry as a result of a major initiative by the FDA called Pharmaceutical cGMPs for the 21st Century A Risk Based Approach The FDA defines PAT as a system for designing analyzing and controlling manufacturing through timely measurements i e during processing of critical quality and performance attributes of raw and in process materials and processes with the goal of ensuring final product quality The biotechnology industry has started incorporating PAT in manufacturing because of regulatory pressure and because the previous blockbuster oriented business model is becoming less viable This thesis proposes a methodology for evaluating PAT systems and delivers guidance on how to develop and implement them to effectively manage risk in biopharmaceutical manufacturing The methodology includes guidance regarding identifying opportunities evaluating and implementing novel analytical technology appropriately applying acquired data and managing change associated with PAT implementation Experimental results from a novel PAT system that acquires light scattering and UV absorbance data to control chromatography during large scale manufacturing are presented as a case study The case study follows the methodology to show how a system optimized for a laboratory can be scaled for use in biopharmaceutical manufacturing Process Analytical Technology Pat Gerard Blokdyk,2017-10-07 What is our formula for success in Process
