Smith, 1983 *This Business of Radio Programming* Claude Hall, Barbara Hall, 1977 *Radio Programming Tactics and Strategies* Eric G. Norbert, 2018-05-04 First published in 2002 This volume provides a practical handbook for the would be and already installed radio Program Director It seeks to convey the underlying fundamentals upon which all successful programming is based Understanding how the listener relates to what he or she hears on the radio and what it takes to shape and direct those perceptions this book also lends itself to college level broadcast courses and professional level curriculums *Library of Congress Subject Headings* Library of Congress, 2009 *Process and Practice of Radio Programming* Joanna R. Lynch, Greg Gillispie, 1998-04-30 Rapid changes in the radio industry in recent years have brought new challenges to radio program directors This book addresses these changes and provides case studies from some of the most respected broadcasters in the industry *Process and Practice of Radio Programming* examines all aspects of a radio programmer's job Among the topics discussed are creating a program clock developing an ear for selecting tomorrow's hits hiring managing and working airchecking with talent image creation marketing a station ratings and research working with sales promotions news new technologies including Virtual Radio Programming surviving within a multipoly situation how to compete competitively with other stations in the market understanding obligations to the FCC developing relationships with record companies clients marketing and research firms and others as well as learning how to program to a target audience **Future Radio Programming Strategies** David MacFarland, 2013-10-18 Fundamental beliefs is what the reader will be exploring here a common understanding of what the radio enterprise should be about entertainment and information A major thrust of this book is to arrive at a set of fundamental beliefs about the values and realities of the radio business in regard to entertainment programming a set of beliefs that may or may not be right true or forever but that might at least provide a basis for

developing programming strategies This second edition of *Future Radio Programming Strategies* seeks to answer the question What do listeners really want from radio Some of the answers are derived from users and gratifications research in the mass media Instead of focusing on what mass media do to people the users and gratifications perspective seeks to discover what people do with mass media The functionalist viewpoint of such research basically says that a medium is best defined by how people use it Having looked at some of the audience research that comes from sources other than the standard ratings companies the book then goes on to demonstrate new ways that formats production procedures and announcing styles can meet audience needs and desires Although the volume concludes with several original methods for selecting and presenting airplay music based on the audience s moods and emotional needs it does not insist upon a singular formulaic approach for constructing or modifying a music format Instead it attempts to involve the reader in thinking through the process of format development Two audio tapes are also available for use with the book The tapes contain nearly 3 hours of important detailed information and provocative points from the book Exclusive audio examples include the sense of acoustic space in music hi fi versus lo fi listening environments subjective perception of the announcer s distance from the listener audio editing rates comparison of luxury versus inexpensive car listening experiences and the components of emotions that are expressed vocally The tapes also include new sections about the threats to traditional radio from specialized digital audio services competition for the listener s attention from computer based media and additional proof of how music can be chosen on the basis of listeners emotional reactions and mood needs

Two-Way Radio Programming Basics Martin Blochberger, 2015-09-27 This book Two way radio programming basics focus on software based programming of analog voice two way radios The book is radio model agnostic and gives you a broad overview on how to program your radio Usually after purchasing a two way radio the number one question most people ask Now how do I program this thing This is the question this book answer It is an easy guide for the first steps in basic two way radio programming This book is for anyone who touches a two way radio daily at their job or during events or at their Amateur radio club CERT group or while on an emergency disaster preparation exercise or out hunting and always wanted to know how to program their own radio For instance add a new channel or edit a channel

already programmed into the radio Why does this book only focus on software based two way radio programming Since there are many different types of two way radio models out there with their own particular way of programming the specific radio this book will exclusively focus on software based programming Because there is no way this book can cover every single radio model and the way to program them On the other hand the radio programming software packages are very similar in structure Besides in most cases it is anyway a lot faster and easier to program the radio with the computer software than mess with the radio menu structure to program it
