The Impact of Oportunidades on Human Capital and Income Distribution Dario Debowicz, Jennifer

Golan,2013-04-05 In an effort to inform social policy in Mexico this paper analyzes the effects of a major social program on school attendance and household income distribution accounting for its partial and general equilibrium effects Linking a microeconomic simulation model and a general equilibrium model in a bidirectional way the paper explicitly takes spillover effects of the Oportunidades conditional cash transfer program into account Our results suggest that partial equilibrium analysis alone may underestimate the distributional effects of the program Extending the coverage of the program leads to a significant increase in school attendance which reduces labor supply and increases the equilibrium wages of the children who remain at work This general equilibrium effect indirectly reduces income inequality and poverty at the national level

Filling the learning gap in program implementation using participatory monitoring and evaluation Elias Zerfu,Sindu W. Kebede,2013-03-29 This study is motivated by the idea that even though participatory monitoring and evaluation PM E is widely accepted as a tool to manage development programs to be effective its application is widely constrained by its high start up resource requirements in terms of both finance and time However this paper argues that after the initial investment is made the payback from using PM E is much higher both in terms of grassroots level learning empowerment and capacity building and in terms of higher level strategic decision making which enhances impact This is demonstrated using field level experience of implementing PM E in farmer field schools FFSs under the Agricultural Services Support Program and Agricultural Sector Development Program Livestock ASSP ASDP L program in Zanzibar Tanzania After describing the major steps followed in designing and implementing a PM E for FFSs the major lessons learned and challenges faced in the process are discussed The study found out that PM E has enabled the tracking of technology uptake and reasons behind adoption and nonadoption of technologies through detailed data collection This informed and improved decision making at a higher level to design feasible methods to scale up adoption at other FFSs and to devise solutions for nonadoption The need for incentives to undertake PM E was found to be one of the major challenges of implementation among others
