Macromolecular Symposia - No. 184 K.-J. Eichhorn, I. Meisel, K. Grieve, C. S. Kniep, S. Spiegel, 2003-02-03

Spectroscopic techniques are among the most developed and useful tools for investigating bulk polymers and polymer surfaces. The variety of spectroscopic analyses possible is very broad and includes IR, Raman, UV-vis, fluorescence, NMR, EPR, mass spectroscopy, XPS, EELS, electrical, mechanical, and ultrasound. These methods can be used to study characteristics such as order and crystallinity, phase transitions, deformation, and viscoelasticity, and also surface modification. All these topics as well as modern trends such as the application of electric fields and supercritical fluids and in-line process monitoring were discussed at the 14th European Symposium on Polymer Spectroscopy ESOPS 14 held in Dresden, Germany, in September 2001 and are presented in this volume of macromolecular Symposia. *Analysis of Thermoset Materials, Precursors and Products* Martin J. Forrest, 2003. This report presents an overview of the chemical analysis of thermosets. Materials based on thermosets present the analyst with considerable challenges due to their complexity and the wide range of polymer types and additives available. This review sets out to present an introduction to the analytical techniques and methods that are used to characterise and carry out quality control work on thermosets, investigate the failure of thermoset products, and to reformulate thermoset compounds. The review is accompanied by around 400 abstracts from papers and books in the Rapra Polymer Library database to facilitate further reading on this subject. *Macromolecular Symposia, No. 199* Hans R. Kricheldorf, 2003. The international symposium POLYCONDENSATION 2002, 15-18 September in Hamburg, Germany, was the 4th meeting of a series launched in Paris 1996. This symposium covered topics such as New theories, New synthetic methods, Block copolymers, Hyperbranched polymers, Liquid crystalline polymers, Properties and application. This book contains oral contributions of the symposium. *Polymer Processing with Supercritical Fluids* Vanessa Goodship, Erich Ogur, 2004. SCFs are currently the subjects of intense research and commercial interest. Applications such as the RESS rapid expansion of supercritical fluid solutions process are part of standard industrial practice. In view of their ever growing importance in the polymer industry, there is a need to fully comprehend how supercritical fluids interrelate with polymeric materials to realise the potential that can be gained from their use. The authors review the basic principles of SCFs and their application within the polymer industry, characteristics and properties, extraction of unwanted residual products, polymerisation solvents, and polymer impregnation. Processing applications such as plasticisation, foaming, and blending are also considered. There is discussion of the potential within the polymer recycling industry for use of SCFs as cleaning agents or within supercritical oxidation processes. Around 400 references with abstracts from recent global literature accompany this review, sourced from the Polymer Library to facilitate further reading. A subject index and a company index are included. **Polymer Spectroscopy** Vasilis G. Gregoriou, 2004-06-10. This issue of Macromolecular Symposia contains the papers presented at the 15th European Symposium on Polymer Spectroscopy ESOPS 15 held in Hersonissos, Greece, in June 2003. Recent advances in

the applications of a variety of spectroscopic techniques such as Infrared Raman Fluorescence NMR Mass spectroscopy Electrical and mechanical spectroscopy The characterization and analysis of polymers systems In particular applications of the above techniques to the analysis of polymeric nanocomposites all polymer solar cells biopolymers and food packaging polymers as well as theoretical and fundamental aspects in polymer spectroscopy are the topics covered in this volume

Emulsion Polymerisation and Latex Applications Christopher D. Anderson, Eric S. Daniels, 2003 The term latex covers emulsion polymers polymer dispersions and polymer colloids This review report provides a general overview of the emulsion polymerisation processes and explains how the resulting latices are used in industrial applications The classes of emulsion polymers are surveyed and the commercial technologies and potential future uses discussed An additional indexed section containing several hundred abstracts from the Polymer Library gives useful references for further reading
