Mobility, Migration and the Chinese Scientific

Research System Koen Jonkers, 2010-04-07 China's rise is having a large impact on the global science system The internalisation of this system in the past two decades would not have been possible without the outbound and especially the return flows of overseas Chinese scientists This book explores their impact combining macro level institutional and statistical analysis with an account of how the research culture has changed at the operational level The theoretical framework used departs from the human capital approach by building on literature from migration studies and evolutionary theories of the science system It presents the results of an innovative mix of quantitative and qualitative methodological approaches Overseas Chinese scientists and returnees are shown to have played an important role in shaping the internal development of the Chinese research system as well as its relationship with research systems in Western Europe and North America Now that the situation is improving return has become an increasingly interesting option for expatriate researchers This development may result in a virtuous cycle Based on extensive and original empirical research Mobility Migration and the Chinese Scientific Research System will be of interest to scholars and postgraduate students of research systems in general and the Chinese research and innovation system in particular

Proceedings ,2002 Observation and Experiment in

the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent

theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation **Applications of Space Techniques on the Natural Hazards in the MENA Region** Mashael M. Al Saud, 2022-04-29 This book introduces a comprehensive understanding in the use of space techniques in natural hazards and risk management in the MENA Region. The book is based on different case studies from 25 MENA countries and will be useful in highlighting the issues from all aspects. In recent years the number of natural hazard events has increased in the MENA Region. This is exacerbated by the changing climate and extreme climate events as well as a large increase in the population in this area. Disastrous events occur on a yearly basis characterized by a vulnerability of physical processes. Floods, earthquakes and mass movement result in severe damage to property and livelihoods and have devastating effects upon the environment. These events cause severe financial losses which on an annual basis can exceed millions of dollars. The predication assessment and monitoring approaches remain inadequate in managing these hazards and in mitigating their impacts but with the development of space techniques and geo information systems these situations can now be better managed. The miscellany of satellite images with different spatial and temporal resolutions enable the detection of terrain features and provide indications of potential natural risks. This book will be of interest to stakeholders including field experts, academics, researchers and decision makers.

Information Technology Outlook 2002 ICTs and the Information Economy OECD, 2002-06-21 This volume describes the main trends in industries and businesses supplying IT goods and services. It looks at the impact of IT diffusion and applications as well as the growing importance of network effects as the use of IT expands China's Great Economic Transformation Loren Brandt, Thomas G. Rawski, 2008-04-14 This landmark study provides an integrated analysis of China's unexpected economic boom of the past three decades. The authors combine deep China expertise with broad disciplinary knowledge to explain China's remarkable combination of high speed growth and deeply flawed institutions. Their work exposes the mechanisms underpinning the origin and expansion of China's great boom. Penetrating studies track the rise of Chinese capabilities in manufacturing and in research and development. The editors probe both achievements and weaknesses across many sectors including China's fiscal, legal and financial institutions. The book shows how an intricate minuet combining China's political system with sectorial development, globalization, resource transfers across geographic and economic space and partial system reform delivered an astonishing and unprecedented growth spurt *The Regulation of Agricultural Biotechnology* Robert E. Evenson, V. Santaniello, 2004-03-29 The regulatory systems in place prior to the development and expansion of agricultural biotechnology are still responding to this new form of technology. Such systems include trade law, intellectual property law, contract law, environmental regulations and biosafety regulations. This book reviews these regulatory changes and consists of 24 chapters developed from papers presented at a conference of the International Consortium on Agricultural Biotechnology Research held in Italy in July 2002. It primarily considers the relationship between these changes and innovation, market development and international trade **Proceedings of the**
