The Insects R. F. Chapman, 2012-11-12 The *Insects* has been the standard textbook in the field since the first edition published over forty years ago Building on the strengths of Chapman s original text this long awaited 5th edition has been revised and expanded by a team of eminent insect physiologists bringing it fully up to date for the molecular era The chapters retain the successful structure of the earlier editions focusing on particular functional systems rather than taxonomic groups and making it easy for students to delve into topics without extensive knowledge of taxonomy The focus is on form and function bringing together basic anatomy and physiology and examining how these relate to behaviour This combined with nearly 600 clear illustrations provides a comprehensive understanding of how insects work Now also featuring a richly illustrated prologue by George McGavin this is an essential text for students researchers and applied entomologists alike

Ecological and Environmental Physiology of Insects Jon F. Harrison, H. Arthur Woods, Stephen P. Roberts, 2012-01-26 They play critical roles in ecological food webs remain devastating agricultural and medical pests and represent the most diverse group of eukaryotes in terms of species numbers

Animal Locomotion Graham Taylor, Michael S. Triantafyllou, Cameron Tropea, 2010-03-20 The physical principles of swimming and flying in animals are intriguingly different from those of ships and airplanes The study of animal locomotion therefore holds a special place not only at the frontiers of pure fluid dynamics research but also in the applied field of biomimetics which aims to emulate salient aspects of the performance and function of living organisms For example fluid dynamic loads are so significant for swimming fish that they are expected to have developed efficient flow control procedures through the evolutionary process of adaptation by natural selection which might in turn be applied to the design of robotic swimmers And yet sharply contrasting views as to the energetic efficiency of

oscillatory propulsion especially for marine animals demand a careful assessment of the forces and energy expended at realistic Reynolds numbers For this and many other research questions an experimental approach is often the most appropriate methodology This holds as much for flying animals as it does for swimming ones and similar experimental challenges apply studying tethered as opposed to free locomotion or studying the flow around robotic models as opposed to real animals This book provides a wide ranging snapshot of the state of the art in experimental research on the physics of swimming and flying animals The resulting picture reflects not only upon the questions that are of interest in current pure and applied research but also upon the experimental techniques that are available to answer them **Behavioral Genetics**

Analysis of *Drosophila Melanogaster* Muscle Myosin Heavy Chain Alternative Domains Becky Marlene Miller, 2004

Drosophila melanogaster has a single myosin alkali light chain gene which encodes for two protein isoforms by developmentally regulated alternative splicing of the primary transcript All six of the exons in the gene are present in the mRNA of larval muscles and the tubular and abdominal muscles of the adults A novel mRNA species present exclusively in the adult and pupal Indirect Flight Muscle IFM lacks the fifth exon thus encoding a MLC ALK isoform with a variant carboxyl terminus All introns of the transcript contain the established consensus splicing signals with the exception of intron 4 In this intron a non canonical polypurine stretch replaces the consensus polypyrimidine rendering it a likely regulatory site Because the transcripts are colinear with the gene throughout development the alternative splicing pattern in the IFM appears to be regulated at the level of splice site choice The goal of this research is to identify the cis regulatory sequences that control the choice between alternative larval and IFM specific splicing pathways I have developed a transient expression system for *Drosophila* Schneider 2 cultured cells utilizing the *Drosophila* metallothionein promoter to direct transcription of transfected MLC ALK minigenes This analysis demonstrated that the larval specific splicing pathway represents the default splicing of the MLC ALK transcripts Analysis of mutant minigene transcripts revealed that splicing in the IFM specific pathway is not the result of blockage or incapacitation of either splice acceptor or and donor sequences flanking exon 5 The structures of the mutant mRNAs suggest that utilization of the IFM specific pathway requires trans acting factors which are absent in the cultured cells Furthermore analysis of mutant and hybrid minigene transcripts identified a unique cis regulatory sequence proximal to the splice donor of intron 4 required for efficient utilization of the larval specific splicing pathway Mutations in intron 4 inhibit removal of the downstream intron 5 suggesting that an ordered pathway of intron removal is employed for larval specific splicing On the basis of these results a model of the mechanism of tissue and temporal regulation of alternative

splicing of the MLC ALK transcripts is presented
