Natures Magic Synergy In Evolution And The Fate Of Humankind:

Nature's Magic Peter Corning, 2003-05-05 *Nature's Magic* presents a bold vision of the evolutionary process from the Big Bang to the 21st century. Synergy of various kinds is not only a ubiquitous aspect of the natural world but it has also been a wellspring of creativity and the driver of the broad evolutionary trend toward increased complexity in nature and human societies alike. But in contrast with the many theories of emergence or complexity that rely on some underlying force or law, the Synergism Hypothesis, as Peter Corning calls it, is in essence an economic theory of biological complexity; it is fully consistent with mainstream evolutionary biology. Corning refers to it as Holistic Darwinism. Among the many important insights that are provided by this new paradigm, Corning presents a scenario in which the human species invented itself: synergistic behavioral and technological innovations were the pacemakers of our biological evolution. Synergy has also been the key to the evolution of complex modern societies, he concludes. **The Beginning and the End** Clément

Vidal, 2014-05-16 In this fascinating journey to the edge of science, Vidal takes on big philosophical questions: Does our universe have a beginning and an end, or is it cyclic? Are we alone in the universe? What is the role of intelligent life, if any, in cosmic evolution? Grounded in science and committed to philosophical rigor, this book presents an evolutionary worldview where the rise of intelligent life is not an accident but may well be the key to unlocking the universe's deepest mysteries. Vidal shows how the fine-tuning controversy can be advanced with computer simulations. He also explores whether natural or artificial selection could hold on a cosmic scale. In perhaps his boldest hypothesis, he argues that signs of advanced extraterrestrial civilizations are already present in our astrophysical data. His conclusions invite us to see the meaning of life, evolution, and intelligence from a novel cosmological framework that should stir debate for years to come. *Plant Behaviour and Intelligence* A. J. Trewavas, 2015

This book argues that whole cells and whole plants growing in competitive wild conditions show aspects of plant behaviour that can be accurately described as intelligent, and that behaviour like intelligence must be assessed within the constraints of the anatomical and physiological framework of the organism in question. **Biological Emergences** Robert G. B. Reid, 2009-08-21 A critique of selectionism and the proposal of an alternate theory of emergent evolution that is causally sufficient for evolutionary biology. Natural selection is commonly interpreted as the fundamental mechanism of evolution. Questions about how selection theory can claim to be the all-sufficient explanation of evolution often go unanswered by today's neo-Darwinists, perhaps for fear that any criticism of the evolutionary paradigm will encourage creationists and proponents of intelligent design. In *Biological Emergences*, Robert Reid argues that natural selection is not the cause of evolution. He writes that the causes of variations, which he refers to as natural experiments, are independent of natural selection; indeed, he suggests, natural selection may get in the way of evolution. Reid proposes an alternative theory to explain how emergent novelties are generated and under what conditions they can overcome the resistance of natural selection. He suggests that what causes innovative variation causes evolution, and

that these phenomena are environmental as well as organismal After an extended critique of selectionism Reid constructs an emergence theory of evolution first examining the evidence in three causal arenas of emergent evolution symbiosis association evolutionary physiology behavior and developmental evolution Based on this evidence of causation he proposes some working hypotheses examining mechanisms and processes common to all three arenas and arrives at a theoretical framework that accounts for generative mechanisms and emergent qualities Without selectionism Reid argues evolutionary innovation can more easily be integrated into a general thesis Finally Reid proposes a biological synthesis of rapid emergent evolutionary phases and the prolonged dynamically stable non evolutionary phases imposed by natural selection

Generative Emergence Benyamin Lichtenstein, 2014-06-20 How do organizations become created Entrepreneurship scholars have debated this question for decades but only recently have they been able to gain insights into the non linear dynamics that lead to organizational emergence through the use of the complexity sciences Written for social science researchers Generative Emergence summarizes these literatures including the first comprehensive review of each of the 15 complexity science disciplines In doing so the book makes a bold proposal for a discipline of Emergence and explores one of its proposed fields namely Generative Emergence The book begins with a detailed summary of its underlying science dissipative structures theory and rigorously maps the processes of order creation discovered by that science to identify a 5 phase model of order creation in entrepreneurial ventures The second half of the book presents the findings from an experimental study that tested the model in four fast growth ventures through a year long week by week longitudinal analysis of their processes based on over 750 interviews and 1000 hours of on site observation These data combined with reports from over a dozen other studies confirm the dynamics of the 5 phase model in multiple contexts By way of conclusion the book explores how the model of Generative Emergence could be applied to enact emergence within and across organizations

Evolution "On Purpose" Peter A. Corning, Stuart A. Kauffman, Denis Noble, James A. Shapiro, Richard I. Vane-Wright, 2023-08-22 A unique exploration of teleonomy also known as evolved purposiveness as a major influence in evolution by a broad range of specialists in biology and the philosophy of science The evolved purposiveness of living systems termed teleonomy by chronobiologist Colin Pittendrigh has been both a major outcome and causal factor in the history of life on Earth Many theorists have appreciated this over the years going back to Lamarck and even Darwin in the nineteenth century In the mid twentieth century however the complex dynamic process of evolution was simplified into the one way bottom up single gene centered paradigm widely known as the modern synthesis In Evolution On Purpose edited by Peter A Corning Stuart A Kauffman Denis Noble James A Shapiro Richard I Vane Wright and Addy Pross some twenty theorists attempt to modify this reductive approach by exploring in depth the different ways in which living systems have themselves shaped the course of evolution Evolution On Purpose puts forward a more inclusive theoretical synthesis that goes far beyond the underlying principles and assumptions of the modern synthesis to accommodate work since the 1950s in molecular

genetics developmental biology epigenetic inheritance genomics multilevel selection niche construction physiology behavior biosemiotics chemical reaction theory and other fields In the view of the authors active biological processes are responsible for the direction and the rate of evolution Essays in this collection grapple with topics from the two way read write genome to cognition and decision making in plants to the niche construction activities of many organisms to the self making evolution of humankind As this collection compellingly shows and as bacterial geneticist James Shapiro emphasizes The capacity of living organisms to alter their own heredity is undeniable

Superorganism Peter A.

Corning, 2023-08-03 As evidence of our global survival crisis continues to mount the expression too little too late comes to mind We all live in an interdependent world which has an increasingly shared fate We are participants in an emerging global superorganism that is dependent on close cooperation Indeed positive synergy cooperative effects has been the key to our evolutionary success as a species However our ultimate fate is now in jeopardy Going forward we must either create a more effective global society with collective self governance or our species will very likely be convulsed by mass starvation waves of desperate migrants and lethal social conflict The greatest threat we may face is each other and a regression into tribalism and violent conflict This Element has a more hopeful prescription for a new global social contract It is based on the many examples of superorganisms socially organized species in the natural world and in evolution

Darwinian Biolinguistics

Antonino Pennisi, Alessandra Falzone, 2016-12-15 This book proposes a radically evolutionary approach to biolinguistics that consists in considering human language as a form of species specific intelligence entirely embodied in the corporeal structures of Homo sapiens The book starts with a historical reconstruction of two opposing biolinguistic models the Chomskian Biolinguistic Model CBM and the Darwinian Biolinguistic Model DBM The second part compares the two models and develops into a complete reconsideration of the traditional biolinguistic issues in an evolutionary perspective highlighting their potential influence on the paradigm of biologically oriented cognitive science The third part formulates the philosophical evolutionary and experimental basis of an extended theory of linguistic performativity within a naturalistic perspective of pragmatics of verbal language The book proposes a model in which the continuity between human and non human primates is linked to the gradual development of the articulatory and neurocerebral structures and to a kind of prelinguistic pragmatics which characterizes the common nature of social learning In contrast grammatical semantic and pragmatic skills that mark the learning of historical natural languages are seen as a rapid acceleration of cultural evolution The book makes clear that this acceleration will not necessarily favour the long term adaptations for Homo sapiens

The Causes of War and the Spread of Peace Azar Gat, 2017-05-05 Azar

Gat sets out to resolve one of the age old questions of human existence why people fight and can they stop Spanning warfare from prehistory to the 21st century the book shows that neither an irresistible drive nor a cultural invention deadly violence and warfare have figured prominently in our behavioural toolkit since the dawn of our species People have always alternated between cooperation peaceful competition and violence to attain evolution shaped human desires A marked shift in the balance between these options has occurred since the onset of the industrial age Rather than modern war becoming more costly it hasn't it is peace that has become more rewarding Scrutinizing existing theories concerning the decline of war such as the democratic peace and capitalist peace Gat shows that they in fact partake of a broader Modernization Peace that has been growing since 1815 By now war has disappeared within the world's most developed areas Finally Gat explains why the Modernization Peace has been disrupted in the past as during the two World Wars and how challenges to it may still arise They include claimants to alternative modernity such as China and Russia anti modernists and failed modernizers that may spawn terrorism potentially unconventional While the world has become more peaceful than ever before there is still much to worry about in terms of security and no place for complacency

Darwin and International Relations Bradley A.

Thayer, 2021-03-17 Shows a mastery of research and theory in both biology and international relations and weaves the two fields together in a compelling fashion Dr Steven A Peterson Director School of Public Affairs Penn State Pathbreaking and controversial Darwin and International Relations offers the first comprehensive analysis of international affairs of state through the lens of evolutionary theory Using ethnological and statistical studies of warfare among tribal societies Bradley A Thayer argues that humans wage war for reasons predicted by evolutionary theory to gain and protect vital resources but also for the physically and emotionally stimulating effects of combat Thayer demonstrates that an evolutionary understanding of disease will become a more important part of the study of international relations as new strains of diseases emerge and advances in genetics make biological warfare a more effective weapon for states and terrorists He also explains the deep causes of ethnic conflict by illuminating how xenophobia and ethnocentrism evolved in humans He notes that these behaviors once contributed to our ancestors success in radically different environments but they remain a part of us Darwin and International Relations makes a major contribution to our understanding of human history and the future of international relations Obligatory reading for social and life scientists alike and deserves to become a standard work in political science International History Review A thoughtful book that can challenge some of our comfortable assumptions Journal of Military History Outstanding This book will become a standard work in political science Roger D Masters Dartmouth College

Rethinking Economic Evolution Ulrich Witt, 2016-07-30 Modern economies never come to rest From institutions to activities of production trade and consumption everything is locked in processes of perpetual transformation and so are our daily lives Why and how do such transformations occur What can economic theory tell us about these changes and where they might lead Ulrich Witt s book discusses why evolutionary concepts are necessary to answer such questions While economic evolution is in many respects unique it nonetheless needs to be seen within the broader context of natural evolution By exploring this complex relationship Rethinking Economic Evolution demonstrates the significance of an evolutionary economic theory
