Patronage Of Science In The Nineteenth Century:

The patronage of science in the nineteenth century G. L. E. Turner, 1976 *The Patronage of Science in the Nineteenth Century* Robert Fox, 1976 The Patronage of Science in the Nineteenth Century, 1976 **The Patronage of Science in the Nineteenth Century: Joint Conference of the British Society for the History of Science and the Past and Present Society, on Friday, 14 April 1972, in the Royal Society, London: Conference Papers** London Joint conference on the patronage of science in the nineteenth century, 1972 **Scientific Advice to the Nineteenth-Century British State** Roland Jackson, 2023-11-14 In twenty first century Britain scientific advice to government is highly organized integrated across government departments and led by a chief scientific adviser who reports directly to the prime minister But at the end of the eighteenth century when Roland Jackson's account begins things were very different With this book Jackson turns his attention to the men of science of the day who derived their knowledge of the natural world from experience observation and experiment focusing on the essential role they played in proffering scientific advice to the state and the impact of that advice on public policy At a time that witnessed huge scientific advances and vast industrial development and as the British state sought to respond to societal economic and environmental challenges practitioners of science engineering and medicine were drawn into close involvement with politicians Jackson explores the contributions of these emerging experts the motivations behind their involvement the forces that shaped this new system of advice and the legacy it left behind His book provides the first detailed analysis of the provision of scientific engineering and medical advice to the nineteenth century British government parliament the civil service and the military *Patronage, Politics, and Practice in Nineteenth-century American Science* Hugh Richard Slotten, 1991 Bibliography of the History of Medicine, 1979

Patronage, Practice, and the Culture of American Science Hugh Richard Slotten, 1994-06-24 In this book Hugh Richard Slotten explores the institutional and cultural history of science in the United States The main focus is on the activities of Alexander Dallas Bache great grandson of Benjamin Franklin and the acknowledged chief of the American scientific community during the second third of the nineteenth century Bache played a central role in the organization and management of a number of key scientific institutions including the American Association for the Advancement of Science the Smithsonian Institution and the National Academy of Sciences But his dominance in these institutions was made possible through his control of an organization less well known today the United States Coast Survey which he superintended from 1843 until his death in 1867 Under Bache's command the Coast Survey became the central scientific institution in antebellum America Using richly detailed archival records Slotten pursues an analysis of Bache and the Coast Survey that illuminates important historiographic themes We gain a better understanding of the particular style of nineteenth century American science by examining the role of the Coast Survey as a source of patronage Perhaps most important this study explores the ways in which scientific knowledge and practice are embedded within local contexts Although Bache sought to

use the Coast Survey to raise the status of American science partly by emulating European scientific elites his efforts also reflected the cultural and political values of antebellum America Sloten thus analyzes the interrelationship between political culture patterns of patronage and the institutional practice of science in the United States
