Goldberg, 2012-12-06 Birkhauser Boston Inc will publish a series of carefully selected monographs in the area of mathematical modeling to present serious applications of mathematics for both the undergraduate and the professional audience Some of the monographs to be selected and published will appeal more to the professional mathematician and user of mathematics serving to familiarize the user with new models and new methods Some like the present monograph will stress the educational aspect and will appeal more to a student audience either as a textbook or as additional reading We feel that this first volume in the series may in itself serve as a model for our program Samuel Goldberg attaches a high priority to teaching students the art of modeling that is to use his words the art of constructing useful mathematical models of real world phenomena We concur It is our strong conviction as editors that the connection between the actual problems and their mathematical models must be factually plausible if not actually real As this first volume in the new series goes to press we invite its readers to share with us both their criticisms and their constructive suggestions

Probability and Social Science Daniel Courceau,2012-02-22 This work examines in depth the methodological
 relationships that probability and statistics have maintained with the social sciences from their emergence It covers both the
 history of thought and current methods First it examines in detail the history of the different paradigms and axioms for
 probability from their emergence in the seventeenth century up to the most recent developments of the three major concepts
 objective subjective and logicist probability It shows the statistical inference they permit different applications to social
 sciences and the main problems they encounter On the other side from social sciences particularly population sciences to
 probability it shows the different uses they made of probabilistic concepts during their history from the seventeenth century
 according to their paradigms cross sectional longitudinal hierarchical contextual and multilevel approaches While the ties
 may have seemed loose at times they have more often been very close some advances in probability were driven by the
 search for answers to questions raised by the social sciences conversely the latter have made progress thanks to advances in
 probability This dual approach sheds new light on the historical development of the social sciences and probability and on the
 enduring relevance of their links It permits also to solve a number of methodological problems encountered all along their
