Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek,Joachim Funke,Magda Osman,Annette Kluge,2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In abroad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e g minimal complex system tests which is a view taken by the psychometric community The proposed approach taken here is that because CPS is multifaceted multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other Thus this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holist approach to investigating and theorizing about these abilities The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS DDM and CDC This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained **Strategies for Optimizing Petroleum**

Play, Exploration and Learning S. John Hutt, Stephen Tyler, Corinne Hutt, Helen Christopherson, 2022-11-21 Originally published in 1989 Play Exploration and Learning was a valuable contribution to the evaluation of nursery practice in Britain at the time this natural history of the activities of children and caring adults presents a comparative study of four types of provision for the under fives nursery schools nursery classes playgroups and day nurseries All four types of provision are seen as happy busy caring environments but they vary greatly in terms of staffing levels training and material provision The authors look at the play of three to five year old children and the activities of the adults who care for them They examine in detail children's choices of materials and their use of them with special attention given to the way language is used by both children and adults during play They also describe adults' expectations of the various provisions and the values of the activities pursued in them Of special interest is the emphasis placed by adults upon fantasy play and the often large discrepancy between expectation and practice Also covered are the difference in the play activities of part time and full time nursery school children and the transition from pre school to first school The book will still be of historical interest to pre school practitioners to developmental psychologists and to educational administrators

Play and Exploration in Children and Animals Thomas G. Power, 1999-11-01 Play is a paradox Why would the young of so many species the very animals at greatest risk for injury and predation devote so much time and energy to an activity that by definition has no immediate purpose This question has long puzzled students of animal behavior and has been the focus of considerable empirical investigation and debate In this first comprehensive and state of the art review of what we have learned from decades of research on exploration and play in children and animals Power examines the paradox from all angles Covering solitary activity as well as play with peers siblings and parents he considers the nature development and functions of play as well as the gender differences in early play patterns A major purpose is to explore the relevance of the animal literature for understanding human behavior The nature and amount of children's play varies significantly across cultures so the author makes cross cultural comparisons wherever possible The scope is broad and the range multidisciplinary He draws on studies by developmental researchers in psychology and other fields ethologists anthropologists sociologists sociolinguists early childhood educators and pediatricians And he places research on play in the context of research on such related phenomena as prosocial behavior and aggression Finally Power points out directions for further inquiry and implications for those who work with young children and their parents Researchers and students will find Play and Exploration in Children and Animals an invaluable summary of controversies methods and findings practitioners and

educators will find it an invaluable compendium of information relevant to their efforts to enrich play experiences
