Problem solving activities in post-editing and translation from scratch Jean Nitzke,2019 Companies and organisations are increasingly using machine translation to improve efficiency and cost effectiveness and then edit the machine translated output to create a fluent text that adheres to given text conventions This procedure is known as post editing Translation and post editing can often be categorised as problem solving activities When the translation of a source text unit is not immediately obvious to the translator or in other words if there is a hurdle between the source item and the target item the translation process can be considered problematic Conversely if there is no hurdle between the source and target texts the translation process can be considered a task solving activity and not a problem solving activity This study investigates whether machine translated output influences problem solving effort in internet research syntax and other problem indicators and whether the effort can be linked to expertise A total of 24 translators twelve professionals and twelve semi professionals produced translations from scratch from English into German and monolingually post edited machine translation output for this study The study is part of the CRITT TPR DB database The translation and monolingual post editing sessions were recorded with an eye tracker and a keylogging program The participants were all given the same six texts two texts per task Different approaches were used to identify problematic translation units First internet research behaviour was considered as research is a distinct indicator of problematic translation units Then the focus was placed on syntactical structures in the MT output that do not adhere to the rules of the target language as I assumed that they would cause problems in the monolingual post editing tasks that would not occur in the translation from scratch task Finally

problem indicators were identified via different parameters like Munit which indicates how often the participants created and modified one translation unit or the inefficiency InEff value of translation units i.e. the number of produced and deleted tokens divided by the final length of the translation. Finally the study highlights how these parameters can be used to identify problems in the translation process data using mere keylogging data. **Newton's Principia For The Modern Student**

Joseph Gallant, 2025-01-24 At some point in their careers most physicists make an attempt to read and understand Newton's Principia. Unfortunately it is an extremely difficult book; it quickly becomes clear that one does not simply read the Principia. Even for a professional physicist Newton's prose written in Latin and translated to English is difficult to follow. His diagrams and figures are complicated and confusing. To understand fully what Newton had done the problems he posed would have to be solved by the reader. Newton's geometric methods and techniques and the geometry and vocabulary that passed for common knowledge in the late 17th century are now arcane and all but inaccessible to a modern reader. The contents of the Principia are not. Most physicists and physics students and many scientists in general would find the physics in the Principia interesting, illuminating and useful. This book presents all the wonderful physics in the Principia in a manner that a modern reader can recognize and understand using physics and mathematics as we understand them in the 21st century.

Integrative Problem-Solving in a Time of Decadence George Christakos, 2010-12-10 Presents a unique study of Integrative Problem Solving IPS The consideration of Decadence is essential in the scientific study of environmental and other problems and their rigorous solution because the broad context within which the problems emerge can affect their solution Stochastic reasoning underlines the conceptual and methodological framework of IPS and its formulation has a mathematical life of its own that accounts for the multidisciplinary of real world problems the multisourced uncertainties characterizing their solution and the different thinking modes of the people involved Only by interpolating between the full range of disciplines including stochastic mathematics physical science neuropsychology philosophy and sociology and the associated thinking modes can scientists arrive at a satisfactory account of problem solving and be able to distinguish between a technically complete problem solution and a solution that has social impact

Modern Research and Studies in Educational Sciences III Ayşe Gül ÇİRKİNOĞLU ŞEKERCİOĞLU, 2025-03-23 *Transfer of Learning from a Modern Multidisciplinary Perspective* Jose P. Mestre, 2006-07-01 The chapters contained in the book present a new and exciting set of conceptual tools that will not only allow us to think about transfer in more productive ways but will also enable the development of educational and measurement tools that will greatly facilitate our ability to educate the children in our schools This volume is eclectic in bringing together researchers from psychology and science education especially physics who would not normally present their ideas under the same forum to share their views and perspectives on transfer What we

believe has emerged is a fresh look at transfer issues from a multidisciplinary perspective AECon 2020 Saefurrohman, Malim Muhammad, Heri Nurdianto, 2021-08-19 The 6th Asia Pacific Education and Science Conference AECON 2020 was conducted on 19-20 December 2020 at Universitas Muhammadiyah Purwokerto Purwokerto Indonesia.
