Problem Solving In A Dynamic Environment:

   Problem Solving In A Dynamic Environment Yan Hong Ng,Shou-fong Chin,1995-03-16 This book looks at the process of human cognition and the way complex problems are solved by decomposing them into a list of strategic objectives before focusing individually on each objective to plan for a tactical solution This process has been formulated by military planners in the form of the Standard Operating Procedure by which problem solving is organised into four different stages deliberation planning war meeting and plan execution This has enabled the development of a methodology for problem solving in a dynamic environment This is illustrated with the help of a six case study in chess and prediction of exchange rate movement in a foreign exchange market   *Instructional Design Principles for High-Stakes Problem-Solving Environments* Chwee Beng Lee,José Hanham,Jimmie Leppink,2018-11-29 This book examines the types of problems and constraints faced by specialists in the areas of security medicine mental health aviation and engineering Every day we rely on highly trained specialists to solve complex problems in high stakes environments that is environments involving direct threats to the preservation of human life While previous work has tended to focus on problem solving in a single domain this book covers multiple related domains It is divided into three parts the first of which addresses the theoretical foundations with coverage of theories of instructional design and expertise Part two covers the five high stakes domains and offers directions for training in these domains In turn part three provides practical guidelines for instructional design in high stakes professions including learner analysis task analysis assessment and evaluation The book is intended for a broad readership including those who operate in high stress time pressure occupations Trainers at professional organisations can utilise the theoretical frameworks and training strategies discussed in this book when preparing their clients for complex real world problem solving Further the book offers a valuable resource for academics and graduate students as well as anyone with an interest in problem solving

subject together with details of latest original research makes Evolutionary Optimization in Dynamic Environments an invaluable resource for researchers and professionals who are dealing with dynamic and stochastic optimization problems and who are interested in applying local search heuristics such as evolutionary algorithms   Artificial Intelligence in the Pacific Rim Hozumi Tanaka,1991 In the last decade AI firmly settled into our industrial society with the expert systems as the representative product However almost every one of the systems could cover only a single task domain In the highly mechanized world of the 21st century systems will become smart and user friendly enough to cover a wide range of task domains Systems with much user friendliness must be multilingual because users in different domains usually have different languages Language is formed in its own culture Therefore promotion for cross cultural scientific interchange will be indispensable for the progress of AI   **Optimization Algorithms** Mykhaylo Andriychuk,Ali Sadollah,2024-07-10 Optimization Algorithms Classics and Last Advances is devoted to developing algorithm theory and exploring the use of different optimization algorithms for solving various problems in pure science applied physics and information technology The book consists of two sections The first focuses on developing abstract algorithms with subsequent applications to real world optimization problems It discusses optimization problems based on partial differential equations canonical polyadic decomposition variational approach and ant colony optimization which are discussed here The second section presents problems related to optimization in information technologies Chapters in this section address the utilization of optimization algorithms to solve problems of reducing computation time and computer memory reducing kernel mechanism processing time in multimedia authoring tools arranging access optimization for special applications and minimizing resources for solving vehicle routing problems   **Designing Evolutionary Algorithms for Dynamic Environments** Ronald W. Morrison,2013-06-29 The robust capability of evolutionary algorithms EAs to find solutions to difficult problems has permitted them to become popular as optimization and search techniques for many industries Despite the success of EAs the resultant solutions are often fragile and prone to failure when the problem changes usually requiring human intervention to keep the EA on track Since many optimization problems in engineering finance and information technology require systems that can adapt to changes over time it is desirable that EAs be able to respond to changes in the environment on their own This book provides an analysis of what an EA needs to do to automatically and continuously solve dynamic problems focusing on detecting changes in the problem environment and responding to those changes In this book we identify and quantify a key attribute needed to improve the detection and response performance of EAs in dynamic environments We then create an enhanced EA designed explicitly to exploit this new understanding This enhanced EA is shown to have superior performance on some types of problems Our experiments evaluating this enhanced EA indicate some pre viously unknown relationships between performance and diversity that may lead to general methods for improving EAs in dynamic environments Along the way several other important design issues are addressed involving com putational efficiency performance measurement and
