Structured and Object-oriented Problem Solving Using C++ Andrew C. Staugaard, 2002 Welcome to the third edition of my C text The highly successful first edition was one of the first textbooks available for teaching C in the first programming course The text was introduced at the 1994 ACM Conference in Phoenix when many were arguing the virtues of teaching C and OOP versus Pascal and structured programming in the first programming course I argued at the time and still argue that students need to be taught problem solving early on using both the structured and object oriented paradigms and because of its hybrid nature C is the only language suited to learning both of these paradigms Since then many institutions have made the switch from Pascal to C for just this reason as well as the intense industry support for C language As a result this third edition continues to provide an introduction to both structured and object oriented problem solving techniques using the C language Of course many improvements have been made based on using the text in numerous classrooms all over the world since 1994 As with earlier editions the text starts from the beginning assuming no previous knowledge of C or any other programming language This text is appropriate for any introductory programming CS1 course using the C language as well as experienced programmers

C Programming with Problem Solving Jacqueline A. Jones, Keith Harrow, 2001 Jones and Harrow present programming concepts in the context of solving problems Each chapter introduces a problem first and then covers the C language elements needed to solve it Students can see how a program is built from its simplest beginning to its final polished form This book introduces beginning programming concepts using the C language Each chapter introduces a problem to solve and then covers the C language constructs necessary to solve the problem Rather than presenting a series of polished one step solutions to programming problems this text seeks to lead you through the process of analyzing problems and writing programs to solve them This text is intended to be used in a one or two semester course covering introductory programming using C No previous knowledge of mathematics or computer science is assumed other than a familiarity with the mathematical notation used in a high school algebra course Problem Solving and Computer Programming Using C Binu

classes teaching students how to write simple classes at first then constructors are added then overloading simple operators then overloading the I O operators and and so forth By defining their own classes early students are getting a hands on experience not provided by those texts that merely teach how to use classes in the beginning This book also comes with Addison Wesley s CodeMate This online program competency builder transforms a student s reading experience into a dynamic programming environment with a click of a mouse CodeMate allows students to view compile run and edit programming problems directly from the textbook without installing a compiler
