Practice Problems-II

Q1) Three moles of an ideal gas are expanded isothermally from a volume of 300 cm³ to 2.5 L at 300 K against a pressure of 1.9 atm. Calculate the work done in L atm and joules.

Soln:- $V_1 = 300 \text{ c.c.} = 0.3 \text{ L}$, $V_2 = 2.5 \text{ L}$, $T = 300 \text{ K}$, $P_{ex} = 1.9 \text{ atm}$

$$\begin{aligned} W &= -P_{ex}\Delta V = -P_{ex}(V_2 - V_1) \\ &= -1.9(2.5 - 0.3) = -1.9 \times 2.2 \end{aligned}$$

$$\therefore W = -4.18 \text{ L atm}$$

$$\text{and } W = -4.18 \times 101.3 = -423.4 \text{ J}$$

Q2) One mole of an ideal gas is compressed from 500 cm³ against a constant pressure of $1.216 \times 10^5 \text{ Pa}$. The work involved in the process is 36.50 J. Calculate the final volume.

Soln:- $V_1 = 500 \text{ c.c.} = 0.5 \text{ dm}^3$,

$$P_{ex} = 1.216 \times 10^5 \text{ Pa} = 1.216 \times 10^2 \text{ kPa}, W = 36.50 \text{ J}$$

$$W = -P_{ex}\Delta V$$

Thermodynamics Sanford Klein, Gregory Nellis, 2011-10-10 This book differs from other thermodynamics texts in its objective which is to provide engineers with the concepts tools and experience needed to solve practical real world energy problems The presentation integrates computer tools such as EES with thermodynamic concepts to allow engineering students and practising engineers to solve problems they would otherwise not be able to solve The use of examples solved and explained in detail and supported with property diagrams that are drawn to scale is ubiquitous in this textbook The

examples are not trivial drill problems but rather complex and timely real world problems that are of interest by themselves. As with the presentation the solutions to these examples are complete and do not skip steps. Similarly the book includes numerous end of chapter problems both typeset and online. Most of these problems are more detailed than those found in other thermodynamics textbooks. The supplements include complete solutions to all exercises, software downloads and additional content on selected topics. These are available on the book's website www.cambridge.org/KleinandNellis.

Problems and Solutions in Engineering Thermodynamics S. C. Singhal, 2009-02-01 Solved Problems in Thermodynamics and Statistical Physics Gregor Skačej, Primož Ziherl, 2019-11-09. This book contains a modern selection of about 200 solved problems and examples arranged in a didactic way for hands on experience with course work in a standard advanced undergraduate first year graduate class in thermodynamics and statistical physics. The principles of thermodynamics and equilibrium statistical physics are few and simple but their application often proves more involved than it may seem at first sight. This book is a comprehensive complement to any textbook in the field emphasizing the analogies between the different systems and paves the way for an in depth study of solid state physics, soft matter physics and field theory.

Problems in Applied Thermodynamics Colin Bodsworth, A. S. Appleton, 1965 **Introduction to Thermodynamics** K. Sherwin, 2012-12-06. As the title implies this book provides an introduction to thermodynamics for students on degree and HND courses in engineering. These courses are placing increased emphasis on business design management and manufacture. As a consequence the direct class time for thermodynamics is being reduced and students are encouraged to self learn. This book has been written with this in mind. The text is brief and to the point with a minimum of mathematical content. Each chapter defines a list of aims and concludes with a short summary. The summary provides an overview of the key words, phrases and equations introduced within the chapter. It is recognized that students see thermodynamics as a problem solving activity and this is reflected by the emphasis on the modelling of situations. As a guide to problem solving worked examples are included throughout the book. In addition students are encouraged to work through the problems at the end of each chapter for which outline solutions are provided. There is a certain timelessness about thermodynamics because the fundamentals do not change. However there is currently some debate over which sign convention should apply to work entering or leaving a thermodynamic system. I have retained the traditional convention of work out of a system being positive. This fits in with the concept of a heat engine as a device that takes in heat and as a result produces positive work.
