Problems of Biology

George Sandeman, 2015-06-02 Excerpt from Problems of Biology The aim of this essay is to inquire into the nature of the problems which come before us in the study of animals and plants in order that we may define the right method and the limits of biology and that we may obtain some adequate criterion by which to judge of the merits of the numerous theories which have arisen in explanation of facts about organisms Its method is throughout that of inquiry and I shall build up no systematic hypothesis as a solution of the problems For we shall find that such hypotheses as are most commonly used in this matter bring with them certain unavoidable disadvantages in that they are themselves in contradiction with the very possibility of research and serve rather to hide the problems than to give any satisfactory account of them And our material is two fold for there are the theories of biology on the one hand and on the other the records of research and these two sources are for the critical study of problems equally important Every serious student of biology must be conscious of a remarkable anarchy within the science as well as of a certain indefiniteness in its scope About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the
