Chavel,H.M. Farkas,2012-12-06 This volume is dedicated to the memory of Harry Ernest Rauch who died suddenly on June 18 1979 In organizing the volume we solicited i articles summarizing Rauch s own work in differential geometry complex analysis and theta functions ii articles which would give the reader an idea of the depth and breadth of Rauch s researches interests and influence in the fields he investigated and iii articles of high scientific quality which would be of general interest In each of the areas to which Rauch made significant contribution pinching theorems teichmiiller theory and theta functions as they apply to Riemann surfaces there has been substantial progress Our hope is that the volume conveys the originality of Rauch s own work the continuing vitality of the fields he influenced and the enduring respect for and tribute to him and his accom plishments in the mathematical community Finally it is a pleasure to thank the Department of Mathematics of the Grad uate School of the City University of New York for their logistical support James Rauch who helped us with the biography and Springer Verlag for all their efforts

  Stratified Morse Theory Mark Goresky,Robert MacPherson,2012-12-06 Due to the lack of proper bibliographical sources stratification theory seems to be a mysterious subject in contemporary mathematics This book contains a complete and elementary survey including an extended bibliography on stratification theory including its historical development Some further important topics in the book are Morse theory singularities transversality theory complex analytic varieties Lefschetz theorems connectivity theorems intersection homology complements of affine subspaces and combinatorics The book is designed for all interested students or professionals in this area   **Introductory Lectures on Automorphic Forms** Walter L. Baily Jr.,2015-03-08 Intended as an introductory guide this work takes for its subject complex analytic automorphic forms and functions on a domain equivalent to a bounded domain in a finite dimensional complex vector space usually denoted Cn Part I essentially elementary deals with complex analytic automorphic forms on a bounded domain it presents H Cartan s proof of the existence of the projective imbedding of the compact quotient of such a domain by a discrete group Part II treats the construction and properties of automorphic forms with respect to an arithmetic group acting on a bounded symmetric domain this part is highly technical and based largely on relevant results in functional analysis due to Godement and Harish Chandra In Part III Professor Baily extends the discussion to include some special topics specifically the arithmetic propertics of Eisenstein series and their connection with the arithmetic theory of quadratic forms Unlike classical works on the subject this book deals with more than one variable and it differs notably in its treatment of analysis on the group of automorphisms of the domain It is concerned with the case of complex analytic automorphic forms because of their connection with algebraic geometry and so is distinct from other modern treatises that deal with automorphic forms on a semi simple Lie group Having had its inception as graduate level lectures the book assumes some knowledge of complex function theory and algebra for the serious reader is expected to supply certain details for himself especially in such related areas as functional analysis and algebraic groups Originally published in 1973 The Princeton Legacy Library uses the latest

print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Handbook of Dynamical Systems A. Katok,B. Hasselblatt,2005-12-17 This second half of Volume 1 of this Handbook follows Volume 1A which was published in 2002 The contents of these two tightly integrated parts taken together come close to a realization of the program formulated in the introductory survey Principal Structures of Volume 1A The present volume contains surveys on subjects in four areas of dynamical systems Hyperbolic dynamics parabolic dynamics ergodic theory and infinite dimensional dynamical systems partial differential equations Written by experts in the field The coverage of ergodic theory in these two parts of Volume 1 is considerably more broad and thorough than that provided in other existing sources The final cluster of chapters discusses partial differential equations from the point of view of dynamical systems

Harmonic Analysis on Semi-Simple Lie Groups I Garth Warner,2012-12-06 The representation theory of locally compact groups has been vig orously developed in the past twenty five years or so of the various branches of this theory one of the most attractive and formidable is the representation theory of semi simple Lie groups which to a great extent is the creation of a single man Harish Chandra The chief objective of the present volume and its immediate successor is to provide a reasonably self contained introduction to Harish Chandra s theory Granting cer tain basic prerequisites cf infra we have made an effort to give full details and complete proofs of the theorems on which the theory rests The structure of this volume and its successor is as follows Each book is divided into chapters each chapter is divided into sections each section into numbers We then use the decimal system of reference for example 1 3 2 refers to the second number in the third section of the first chapter Theorems Propositions Lemmas and Corollaries are listed consecutively throughout any given number

Numbers which are set in fine print may be omitted at a first reading There are a variety of Exam ples scattered throughout the text the reader if he is so inclined can view them as exercises ad libitum The Appendices to the text collect certain ancillary results which will be used on and off in the systematic exposi tion a reference of the form A2
