**Problems in Stellar Atmospheres and Envelopes** B. Baschek, W.H. Kegel, G. Traving, 2012-12-06      **Problems in Stellar Atmosphere and Envelopes**, 1975      **Extended Atmospheres and Circumstellar Matter in Spectroscopic Binary Systems** A.H. Batten, 2012-12-06

The proposal to organize a Symposium on circumstellar matter and extended atmospheres in binary systems was first made by the Dominion Astrophysical Observatory to the Executive Committee of the International Astronomical Union in the summer of 1969. It received the support of the presidents of Commissions 29 Stellar Spectra 30 Radial Velocities 36 Stellar Atmospheres and 42 Photometric Double Stars. Approval in principle was given by the Executive Committee almost immediately and the Committee further suggested that the Symposium be officially designated the Struve Memorial Symposium. Final approval was given at the time of the 1970 General Assembly of the Union when the dates of the Symposium were set for August or September 1972. The Organizing Committee set up consisted of K O Wright Chairman A H Batten K H B6hm A A Boyarchuk G Larsson Leander and M Plavec. In addition J Sahade and F B Wood acted as advisory members. Local organization was entrusted to a committee consisting of A H Batten E K Lee and C D Scarfe. The final dates selected were September 6-12, 1972 and the Symposium was held at the Island Hall Hotel Parksville B C on Vancouver Island some 90 miles from Victoria. The Organizing Committee attempted to arrange a Symposium of the type in which no contributed papers would be presented and discussion would range as widely as possible over the field covered by the six invited review papers.

Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970. Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 13 contains literature published in 1975 and received before August 15, 1975, some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy. We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation Leopoldshafen which supported our abstracting service by sending us retrospective literature searches.

**Spectra** D. Emerson, 1998-02-04 Interpreting Astronomical Spectra D Emerson Institute for Astronomy Department of Physics and Astronomy The University of Edinburgh Interpreting Astronomical Spectra describes how physical conditions such as temperature density and composition can be obtained from the spectra of a broad range of astronomical environments ranging from the cold interstellar medium to very hot coronal gas and from stellar atmospheres to quasars In this book the author has succeeded in providing a coherent and integrated approach to the interpretation of astronomical spectroscopy placing the emphasis on the physical understanding of spectrum formation rather than on instrumental considerations MKS units and consistent symbols are employed throughout so that the fundamental ideas common to diverse environments are made clear and the importance of different temperature ranges and densities can be seen Aimed at senior undergraduates and graduates studying physics astronomy and astrophysics this book will also appeal to the professional astronomer

Crivellari, Ivan Hubeny, D. Hummer, 2012-12-06 The theory of stellar atmospheres is one of the most important branches of modern astrophysics It is first of all a major tool for understanding all aspects of stars As the physical properties of their outer layers can now be found with high precision firm conclusions can be drawn about the internal structure and evolution of stars Moreover improvements in our knowledge of the chemical composition of stars is shedding new light on the chemical evolution of galaxies and of the Universe as a whole Because the outer layers of stars are among the best understood astrophysical objects the theory of stellar atmospheres plays an important role in the study of many other types of objects These include planetary nebulae H II regions interstellar matter and objects of interest in high energy astrophysics such as accretion disks close binaries dwarf novae cataclysmic variables quasars active galactic nuclei pulsar magnetospheres and Seyfert galaxies Finally as stars provide a laboratory in which plasmas can be studied under more extreme conditions than on earth the study of stellar atmospheres has strong connections with modern physics Astronomical observations provided a vital stimulus in the early stages of quantum theory and atomic physics even today topics such as low temperature dielectronic recombination develop hand in hand with the interpretation of stellar and nebular spectra Early work on MHD was similarly motivated Many such connections remain to be explored **Literature 1981, Part 2** S.
