Viscous Profiles and Numerical Methods for Shock Waves Michael Shearer, 1991-01-01 One strongly represented theme is the power of ideas from dynamical systems that are being adapted and developed in the context of shock waves

Modeling and Analysis of Diffusive and Advective Processes in Geosciences William Edward Fitzgibbon, Mary Fanett Wheeler, 1992-01-01 Not a collection of proceedings but 11 papers on topics that emerged from a September 1989 conference in Houston on mathematical and computational issues in geophysical fluid and solid mechanics The discussions include a semi linear heat equation subject to the specification of energy an analytic *Fracture and Damage in Quasibrittle Structures* Z.P. Bazant, Z. Bittnar, M. Jirasek, J. Mazars, 2004-01-14 Understanding of failure of quasibrittle materials is of

paramount importance in many engineering fields This subject has become a broad and important field of considerable mathematical complexity with many competing models and unsolved problems Attention in this volume focuses on concrete rock masonry toughened ceramics ice and other quasibrittle materials characterized by the development of large zones of cracking or other microstructural damage and its localization into major fractures Teaching and Learning Mathematical Problem Solving Edward A. Silver, 2013-04-03 A provocative collection of papers containing comprehensive reviews of

previous research teaching techniques and pointers for direction of future study Provides both a comprehensive assessment of the latest research on mathematical problem solving with special emphasis on its teaching and an attempt to increase communication across the active disciplines in this area Harnack Inequalities and Nonlinear Operators Vincenzo

Vespri, Ugo Gianazza, Dario Daniele Monticelli, Fabio Punzo, Daniele Andreucci, 2021-05-29 The book contains two contributions about the work of Emmanuele DiBenedetto and a selection of original papers The authors are some of the main experts in Harnack s inequalities and nonlinear operators These papers are part of the contributions presented during the conference to celebrate the 70th birthday of Prof Emmanuele DiBenedetto which was held at Il Palazzone in Cortona from June 18th to 24th 2017 The papers are focused on current research topics regarding the qualitative properties of solutions connections with calculus of variations Harnack inequality and regularity theory Some papers are also related to various applications Many of the authors have shared with Prof DiBenedetto an intense scientific and personal collaboration while many others have taken inspiration from and further developed his field of research The topics of the conference are certainly of great interest for the international mathematical community

Shock Induced Transitions and Phase Structures in General Media J.E. Dunn,Roger Fosdick,Marshall Slemrod,2012-12-06 This IMA Volume in Mathematics and its Applications SHOCK INDUCED TRANSITIONS AND PHASE STRUCTURES IN GENERAL MEDIA is based on the proceedings of a workshop that was an integral part of the 1990 91 IMA program on Phase Transitions and Free Boundaries The workshop focused on the thermodynamics and mechanics of dynamic phase transitions that are mainly inertially driven and brought together physicists metallurgists mathematicians engineers and molecular dynamicists with interests in these problems Financial support of the National Science Foundation made the meeting possible We are grateful to J E Dunn Roger Fosdick and Marshall Slemrod for organizing the meeting and editing the proceedings A vner Friedman Willard Miller Jr PREFACE When a body is subjected to a strong shock the material may suffer severe local structural changes Rapid solidification liquification or vaporization can occur and moreover complex structural heterogeneity is often left in the wake of the passing wave Thus inertially driven shock waves raise fundamental questions involving experiment theory and mathematics which bear on phase stability and metastability as well as on reaction kinetics and appropriate measures of phase structure *Effective Teaching Strategies for Dyscalculia and Learning Difficulties in Mathematics* Marie-Pascale Noël,Giannis Karagiannakis,2022-03-28 *Effective Teaching Strategies for Dyscalculia and Learning Difficulties in Mathematics* provides an essential bridge between scientific research and practical interventions with children It unpacks what we know about the possible cognitive causation of mathematical difficulties in order to improve teaching and therefore learning Each chapter considers a specific domain of children s numerical development counting and the understanding of numbers understanding of the base 10 system arithmetic word problem solving and understanding rational numbers The accessible guidance includes a literature review on each topic surveying how each process develops in children the difficulties encountered at that level by some pupils and the intervention studies that have been published It guides the reader step by step through practical guidelines of how to assess these processes and how to build an intervention to help children master them Illustrated throughout with examples

of materials used in the effective interventions described this essential guide offers deep understanding and effective strategies for developmental and educational psychologists special educational needs and or disabilities coordinators and teachers working with children experiencing mathematical difficulties Viscoelasticity and Rheology Arthur S. Lodge, Michael Renardy, John A. Nohel, 2014-06-28 Viscoelasticity and Rheology covers the proceedings of a symposium by the same title conducted by the Mathematics Research Center held at the University of Wisconsin Madison on October 16 18 1984 The contributions to the symposium are divided into four broad categories namely experimental results constitutive theories mathematical analysis and computation This 16 chapter work begins with experimental topics including the motion of bubbles in viscoelastic fluids wave propagation in viscoelastic solids flows through contractions and cold drawing of polymers The next chapters covering constitutive theories explore the molecular theories for polymer solutions and melts based on statistical mechanics the use and limitations of approximate constitutive theories a comparison of constitutive laws based on various molecular theories network theories and some of their advantages in relation to experiments and models for viscoplasticity These topics are followed by discussions of the existence regularity and development of singularities change of type interface problems in viscoelasticity existence for initial value problems and steady flows and propagation and development of singularities The remaining chapters deal with the numerical simulation of flow between eccentric cylinders flow around spheres and bubbles the hole pressure problem and a review of computational problems related to various constitutive laws This book will prove useful to chemical engineers researchers and students **The Rural Educator** ,1914 **Teachers' Monographs** ,1917 *New York Teachers' Monographs* ,1918 **Introduction to Type® and Teams** , *Bio-Inspired Computing: Theories and Applications* Linqiang Pan, Yong Wang, Jianqing Lin, 2024-04-15 The two volume set CCIS 2061 and 2062 constitutes the refereed post conference proceedings of the 18th International Conference on Bio Inspired Computing Theories and Applications BIC TA 2023 held in Changsha China during December 15 17 2023 The 64 revised full papers presented in these proceedings were carefully reviewed and selected from 168 submissions The papers are organized in the following topical sections Volume I Evolutionary Computation and Swarm Intelligence and Membrane Computing and DNA Computing Volume II Machine Learning and Applications and Intelligent Control and Application *Remote Sensing* J D Greer, 1996-09-30 **FTCE Elementary Education K-6** Janet B. Andreasen, Lee-Anne Spalding, Lee-Anne T. Smith, Jean B. Crockett, Cynthia C. Griffin, 2012-04-03 This accessible book presents research based strategies for supporting K 8 students with high incidence disabilities in becoming accomplished learners The authors clearly describe the core components of effective inclusive instruction showing how to recognize and respond to individual students needs quickly and appropriately Teachers are

provided with essential tools for managing inclusive classrooms planning a curriculum that fosters concept development across content areas promotes strategic learning and builds fluent skill use and integrating technology into instruction Case examples illustrate ways that special and general education teachers can work together successfully to solve complex learning problems and improve outcomes for students who are struggling Provided by publisher Using RTI for School Improvement Cara Shores, Kim Chester, 2009 This resource helps administrators and teachers implement RTI as a powerful school improvement process Response to Intervention RTI is currently being adopted throughout the United States as a method for documenting eligibility for a learning disability as permitted in the reauthorization of IDEA 2004 The model most often chosen involves a three or four tier pyramid incorporating general education classroom components in the lower tiers and special education as the final tier Using RTI for School Improvement illustrates how integrating RTI into all aspects of a school can go beyond assessing learning disabilities to make a significant positive impact on schoolwide student achievement The authors show how educators can successfully implement each tier to provide effective instruction for all learners develop an intervention approach for students at risk and provide intensive intervention for non responding learners *Methods of Heuristics* R. Groner, M. Groner, W. F. Bischof, 2014-07-10 This volume constitutes the edited proceedings of an interdisciplinary symposium on Methods of Heuristics which was held at the University of Bern Switzerland from September 15 to 19 1980 In organizing the symposium the editors of the present volume were able to invite specialists from psychology computer science and mathematics From their own perspective they made contributions to the central questions of the conference What are heuristics the methods and rules guiding discovery and problem solving in a variety of different fields How did they develop in individual human beings and in the history of science Is it possible to arrive at a commonly accepted definition of heuristics as the field unifying all these efforts and if yes what are its basic characteristics
