Surveys of Progress on Military Subsistence Problems, 1953 **Matrices and Graphs Stability Problems in Mathematical Ecology** D. Logofet, 2018-02-01 Intuitive ideas of stability in dynamics of a biological population community or ecosystem can be formalized in the framework of corresponding mathematical models These are often represented by systems of ordinary differential equations or difference equations *Matrices and Graphs* covers achievements in the field using concepts from matrix theory and graph theory The book effectively surveys applications of mathematical results pertinent to issues of theoretical and applied ecology The only mathematical prerequisite for using *Matrices and Graphs* is a working knowledge of linear algebra and matrices The book is ideal for biomathematicians ecologists and applied mathematicians doing research on dynamic behavior of model populations and communities consisting of multi component systems It will also be valuable as a text for a graduate level topics course in applied math or mathematical ecology *Control Perspectives on Numerical Algorithms and Matrix Problems* Amit Bhaya, Eugenius Kaszkurewicz, 2006-03-01 This book organizes the analysis and design of iterative numerical methods from a control perspective A variety of applications are discussed including iterative methods for linear and nonlinear systems of equations neural networks for linear and quadratic programming problems and integration and shooting methods for ordinary differential equations *Problems of Stability and Progress in International Relations* Quincy Wright, 2021-05-28 This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1954 Current Price Developments and the Problem of Economic Stabilization United States. Oberkampf, Frederick G. Blottner, 1997 A broad range of mathematical modeling errors of fluid flow physics and numerical approximation errors are addressed in computational fluid dynamics CFD It is strongly believed that if CFD is to have a major impact on the design of engineering hardware and flight systems the level of confidence in complex simulations must substantially improve To better understand the present limitations of CFD simulations a wide variety of physical modeling discretization and solution errors are identified and discussed Here discretization and solution errors refer to all errors caused by conversion of the original partial

differential or integral conservation equations representing the physical process to algebraic equations and their solution on a computer The impact of boundary conditions on the solution of the partial differential equations and their discrete representation will also be discussed Throughout the article clear distinctions are made between the analytical mathematical models of fluid dynamics and the numerical models Lax's Equivalence Theorem and its frailties in practical CFD solutions are pointed out Distinctions are also made between the existence and uniqueness of solutions to the partial differential equations as opposed to the discrete equations Two techniques are briefly discussed for the detection and quantification of certain types of discretization and grid resolution errors

On Modern Approaches of Hamilton-Jacobi Equations and Control Problems with Discontinuities Guy Barles, Emmanuel Chasseigne, 2023-12-29 This monograph presents the most recent developments in the study of Hamilton Jacobi Equations and control problems with discontinuities mainly from the viewpoint of partial differential equations Two main cases are investigated in detail the case of codimension 1 discontinuities and the stratified case in which the discontinuities can be of any codimensions In both connections with deterministic control problems are carefully studied and numerous examples and applications are illustrated throughout the text After an initial section that provides a toolbox containing key results which will be used throughout the text Parts II and III completely describe several recently introduced approaches to treat problems involving either codimension 1 discontinuities or networks The remaining sections are concerned with stratified problems either in the whole space \mathbb{R}^N or in bounded or unbounded domains with state constraints In particular the use of stratified solutions to treat problems with boundary conditions where both the boundary may be non smooth and the data may present discontinuities is developed Many applications to concrete problems are explored throughout the text such as Kolmogorov Petrovsky Piskunov KPP type problems large deviations level sets approach large time behavior and homogenization and several key open problems are presented This monograph will be of interest to graduate students and researchers working in deterministic control problems and Hamilton Jacobi Equations network problems or scalar conservation laws
