

Where  $v_1$  is the first order solution [1.6]. If we take  $\tau = 2\pi = 628.2$  as before then  $\pi/2\tau$ , the putting in [1.13] gives  $A$  as approximately 0.19.

This shows that 10% variation in  $\beta^*$ , as envisaged by Soper, would lead to seasonal variations of about 80% in the rate of notifications.

#### ALLOWANCE FOR INCUBATION PERIOD:

Another possible source of error in the use of the simple continuous infection model is that it makes no allowance for the effect of a fairly well-defined incubation period, such as is clearly recognizable in measles (Ludwig, 1974 and Largent, 1976).

If we suppose that there is a latent period of length  $\alpha$  after infection, at the end of which the infected individual becomes infectious, the processes of infection and removal then proceeding as before, the deterministic equations will be

$$\frac{dS}{dt} = -\beta S(t) y (1-\alpha) + \mu \quad (1.15)$$

$$\frac{dI}{dt} = -\beta S(t) y (1-\alpha) + \alpha y(t)$$

The equilibrium values are exactly the same as for [1.1]. If we now put  $D = \frac{d}{dt}$ , the equations for  $u$  and  $v$  are found to be,

$$\left( D + \frac{\gamma}{1-\alpha} \right) u + \frac{1}{1-\alpha} e^{-\alpha t} u = 0 \quad (1.16)$$

$$-\frac{1}{1-\alpha} u + \left( D + \frac{\gamma}{1-\alpha} - \frac{\gamma}{1-\alpha} e^{-\alpha t} \right) v = 0$$

By short iterative treatment of [1.16], using an operational method is as follows. If we assume that the infection period is short, both  $\beta$  and  $\gamma$  are large and  $\tau$  tends to zero.

The differential equations for  $v$  reduces to

$$\left\{ \left( D + \frac{\gamma}{1-\alpha} \right) e^{-\alpha t} - \alpha \right\} v = 0 \quad (1.17)$$

The form of the solution depends on the roots of

$$\left\{ \left( D + \frac{\gamma}{1-\alpha} \right) e^{-\alpha t} - \alpha \right\} = 0$$

If we write this as

$$\alpha D = -\log \left\{ \left( D + \frac{\gamma}{1-\alpha} \right) \right\}$$

and expand the logarithm in negative powers of  $D$ .

We obtain

$$\alpha D = -\frac{1}{\alpha D} + \frac{1}{\alpha D^2} + \dots \quad (1.18)$$

The first approximation to [1.18] is given by  $D = \sqrt{-\alpha \alpha}$  and the second

$$\alpha D = -\frac{1}{\alpha D} + \frac{\gamma}{1-\alpha}$$

Which is equivalent to the equation

$$\frac{d^2 u}{dt^2} + \frac{\gamma}{1-\alpha} \frac{du}{dt} + \frac{1}{1-\alpha} u = 0 \quad (1.19)$$

Comparing this shows that the approximate solution here is similar to the previous one, except that we now have  $\alpha$  instead of  $\tau$ , and the damping coefficient is halved.

#### RESULT AND DISCUSSION:

From the above discussion we see the model has represented in special way, in which the infection occurs

in human body then the resistance of body gradually decays same as motion decays in damped oscillation (Kermack, and Kendrick, 1927; Hoppersteadt, 1975). On solving the equation of model we get differential equation of damped harmonic oscillation, which shows the phenomenon of occurrence of the infection. Their solution gives the idea about the seasonal variation in infection.

### **The SAGE Handbook of Quantitative Methods in Psychology**

Roger E. Millsap, Alberto Maydeu-Olivares, 2009-08-05 I often wonder to myself whether the field needs another book, handbook or encyclopedia on this topic In this case I think that the answer is truly yes The handbook is well focused on important issues in the field and the chapters are written by recognized authorities in their fields The book should appeal to anyone who wants an understanding of important topics that frequently go uncovered in graduate education in psychology David C. Howell, Professor Emeritus, University of Vermont Quantitative psychology is arguably one of the oldest disciplines within the field of psychology and nearly all psychologists are exposed to quantitative psychology in some form While textbooks in statistics, research methods and psychological measurement exist, none offer a unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area Drawing on a global scholarship the Handbook is divided into seven parts Part One, Design and Inference, addresses issues in the inference of causal relations from experimental and non-experimental research along with the design of true experiments and quasi-experiments and the problem of missing data due to various influences such as attrition or non-compliance Part Two, Measurement Theory, begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent variables in item

response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis
