Mertins, Ricardo Jardim-Gonçalves, Keith Popplewell, João P. Mendonça, 2016-10-18 A concise reference to the state of the art in systems interoperability Enterprise Interoperability VII will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment Furthermore it shows how knowledge of the meaning within information and the use to which it will be put have to be held in common between enterprises for consistent and efficient inter enterprise networks Over 30 papers ranging from academic research through case studies to industrial and administrative experience of interoperability show how in a scenario of globalised markets where the capacity to cooperate with other organizations

efficiently is essential in order to remain economically socially and environmentally cost effective the most innovative digitized and networked enterprises ensure that their systems and applications are able to interoperate across heterogeneous collaborative networks of independent organizations This goal of interoperability is essential not only from the perspective of the individual enterprise but also in the business structures that are now emerging such as complex collaborating networks of suppliers and customers virtual enterprises interconnected organisations or extended enterprises as well as in mergers and acquisitions Establishing efficient and relevant collaborative situations requires the management of interoperability from a dynamic point of view a relevant and efficient collaboration of organizations may require adaptation to remain in line with changing objectives evolving resources unexpected events etc Many of the papers contained in this the eighth volume of Proceedings of the I ESA Conferences have examples and illustrations calculated to deepen understanding and generate new ideas The I ESA 16 Conference from which this book is drawn was organized by the Escola de Engenharia da Universidade do Minho on behalf of the European Virtual Laboratory for Enterprise Interoperability INTEROP VLab and Interop VLab Portuguese Pole

*Enterprise Content Management in Information Systems Research* Jan vom Brocke, Alexander Simons, 2013-11-04 This book collects ECM research from the academic discipline of Information Systems and related fields to support academics and practitioners who are interested in understanding the design use and impact of ECM systems It also provides a valuable resource for students and lecturers in the field Enterprise content management in Information Systems research Foundations methods and cases consolidates our current knowledge on how today s organizations can manage their digital information assets The business challenges related to organizational information management include reducing search times maintaining information quality and complying with reporting obligations and standards Many of these challenges are well known in information management but because of the vast quantities of information being generated today they are more difficult to deal with than ever Many companies use the term enterprise content management ECM to refer to the management of all forms of information especially unstructured information While ECM systems promise to increase and maintain information quality to streamline content related business processes and to track the lifecycle of information their implementation poses several questions and challenges Which content objects should be put under the control of the ECM system Which processes are affected by the implementation How should outdated technology be replaced Research is challenged to support practitioners in answering these questions

Systems Analysis for Water Technology Willi Gujer, 2008-05-27 This book has a rather long history It goes back to 1980 when environmental engineering evolved from sanitary engineering as a new and broader engineering discipline I had the assignment to teach a course in mathematical modeling of technical systems as part of a new postgraduate course in Urban Water Management and Water Pollution Control at ETH in Zurich I decided to teach this course on a rather abstract level with the goal of introducing methods that are generally applicable across the different disciplines of what was then defined as environmental engineering

Now I teach a graduate course in methods for urban water management which heavily relies on the material I compiled in the 1980s This course is offered in the first semester of the master education in environmental engineering at ETH it requires four hours of lecturing and problem sessions a week during one semester The students earn six credit units ECTS Of all the engineering disciplines environmental engineering appears to be among those that maintain the most intimate contacts with the natural science disciplines Only a detailed understanding of chemical physical and microbial processes will lead to engineered systems that fulfill the requirements of society and the environment and at the same time do not require excessive economic and natural resources
