Procedure In Taxonomy:

The Phylogenetic Method in Taxonomy Harvey Monroe Hall, Frederic Edward Clements, 1923 Nordamerika Monographie Chenopodiaceae Asteraceae **Describing Species** Judith E. Winston, 1999-11-04 New species are discovered every day and cataloguing all of them has grown into a nearly insurmountable task worldwide Now this definitive reference manual acts as a style guide for writing and filing species descriptions New collecting techniques and new technology have led to a dramatic increase in the number of species that are discovered Explorations of unstudied regions and new habitats for almost any group of organisms can result in a large number of new species discoveries and hence the need to be described Yet there is no one source a student or researcher can readily consult to learn the basic practical aspects of taxonomic procedures Species description can present a variety of difficulties Problems arise when new species are not given names because their discoverers do not know how to write a formal species description or when these species are poorly described Biologists may also have to deal with nomenclatural problems created by previous workers or resulting from new information generated by their own research This practical resource for scientists and students contains instructions and examples showing how to describe newly discovered species in both the animal and plant kingdoms With special chapters on publishing taxonomic papers and on ecology in species description as well as sections covering subspecies genus level and higher taxa descriptions Describing Species enhances any writer s taxonomic projects reports checklists floras faunal surveys revisions monographs or guides The volume is based on current versions of the International Codes of Zoological and Botanical Nomenclature and recognizes that systematics is a global and multicultural exercise Though Describing Species has been written for an English speaking audience it is useful anywhere Taxonomy is spoken and will be a valuable tool for professionals and students in zoology botany ecology paleontology and other fields of biology

W. C. McKern and the Midwestern Taxonomic Method R. Lee Lyman, Michael J. O'Brien, 2003 Explores W C McKern s use of Linnaean taxonomy as the model for development of a pottery classification system By the early 20th century North American archaeologists had found evidence of a plethora of prehistoric cultures displaying disparate geographic and chronological distributions But there were no standards or algorithms for specifying when a culture was distinct or identical to another in a nearby or distant region Will Carleton McKern of the Milwaukee Public Museum addressed this fundamental problem of cultural classification beginning in 1929 He modeled his solution known as the Midwestern Taxonomic Method on the Linnaean biological taxonomy because he wanted the ability to draw historical and cultural relationships among cultures McKern was assisted during development of the method by Carl E Guthe Thorne Deuel James B Griffin and William Ritchie This book studies the 1930s correspondence between McKern and his contemporaries as they hashed out the method s nuances It compares the several different versions of the method and examines the Linnaean biological taxonomy as it was understood and used at the time McKern adapted it to archaeological problems Finally this volume reveals how and why the

method failed to provide the analytical solution envisioned by McKern and his colleagues and how it influenced the later development of Americanist archaeology

Numerical Taxonomy Joseph Felsenstein, 2013-06-29 The NATO Advanced Study Institute on Numerical Taxonomy took place on the 4th 16th of July 1982 at the Kur und Kongresshotel Residenz in Bad Windsheim Federal Republic of Germany This volume is the proceedings of that meeting and contains papers by over two thirds of the participants in the Institute Numerical taxonomy has been attracting increased attention from systematists and evolutionary biologists It is an area which has been marked by debate and conflict sometimes bitter Happily this meeting took place in an atmosphere of GemÜtlichkeit though scarcely of unanimity I believe that these papers will show that there is an increased understanding by each taxonomic school of each others positions This augurs a period in which the debates become more concrete and specific Let us hope that they take place in a scientific atmosphere which has occasionally been lacking in the past Since the order of presentation of papers in the meeting was affected by time constraints I have taken the liberty of rearranging them into a more coherent subject ordering The first group of papers taken from the opening and closing days of the meeting debate philosophies of classification The next two sections have papers on congruence clustering and ordination A notable concern of these participants is the comparison and testing of classifications This has been missing from many previous discussions of numerical classification

Artifact Classification Dwight W Read, 2016-09-16 Archaeologists have been developing artifact typologies to understand cultural categories for as long as the discipline has existed Dwight Read examines these attempts to systematize the cultural domains in premodern societies through a historical study of pottery typologies He then offers a methodology for producing classifications that are both salient to the cultural groups that produced them and relevant for establishing cultural categories and timelines for the archaeologist attempting to understand the relationship between material culture and ideational culture of ancient societies This volume is valuable to upper level students and professional archaeologists across the discipline

Modern Concepts in Penicillium and Aspergillus Classification Robert A. Samson, John I.
