Talking Wolves A. Biletzki, 2013-03-14 Talking Wolves advances an analysis of Hobbes which takes language seriously as seriously as Hobbes took it It presents a reading of Hobbes's view of society at large and political society in particular through a comprehensive discussion based on and intimately linked to his philosophy of language This philosophy in turn is seen in a new light as being a pragmatic theory of language in use language in action

Critical Rationalism, the Social Sciences and the Humanities I.C. Jarvie, N. Laor, 2013-06-29 An outstanding feature of this book is the broad range of the contributors drawn from Europe the Middle East and North America testifying both to the range of Professor Agassi's interests and the geographical spread of his influence Most contributors use Agassi's ideas as a springboard to engage in

debate on issues or offer a contribution in an area that interests him In this volume contributors consider such questions as Agassi's philosophy of education in practice as well as in theory the impact of psychologism in philosophy the origins of critical rationalism in the Bible the debates in economics stimulated by the work of Popper and Agassi and many other topics Besides the special topics the reader gains some sense of the fruitfulness of critical rationalism in the hands of Agassi's friends and colleagues

Philosophical Lectures on Probability Bruno de Finetti, 2008-05-01 Bruno de Finetti 1906-1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains

Dynamic Epistemic Logic Hans van Ditmarsch, Wiebe van der Hoek, Barteld Kooi, 2007-05-06 Dynamic Epistemic Logic is the logic of knowledge change This book provides various logics to support such formal specifications including proof systems Concrete examples and epistemic puzzles enliven the exposition The book also offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice

The Brain from 25,000 Feet Mark A. Changizi, 2013-06-29 In The Brain from 25,000 Feet Mark A Changizi defends a non reductionist philosophy and applies it to a variety of problems in the brain sciences Some of the key questions answered are as follows Why do we see visual illusions and why are illusions inevitable for any finite speed vision machine Why aren't brains universal learning machines and what does the riddle of induction and its solution have to do with human learning and innateness The author tackles such questions as why the brain is folded and why animals have as many limbs as they do explaining how these relate to principles of network optimality He describes how most natural language words are vague and then goes on to explain the connection to the ultimate computational limits on machines There is also a fascinating discussion of how animals accommodate greater behavioral complexity This book is a must read for researchers interested in taking a high level non mechanistic approach to answering age old fundamental questions in the brain sciences

The Dynamics of Thought Peter Gardenfors, 2005-11-10 This book is a selection from the articles that I have written over a period of more than twenty years Since the focus of my research interests has shifted several times during this period it would be difficult to identify a common theme for all the papers in the volume Following the Swedish tradition I therefore present this as a sm rg sbord of philosophical and cognitive issues that I have worked on To create some order I have organized the sixteen papers into five general sections 1 Decision theory 2 belief revision and nonmonotonic logic 3 induction 4 semantics and pragmatics and 5 cognition and evolution Having said this I still think that there is a common theme to my work over the years The dynamics of thought My academic interests have all the time dealt

with aspects of how different kinds of knowledge should be represented and in particular how changes in knowledge will affect thinking Hence the title of the book **Trading Ontology for Ideology** L. Decock, 2013-03-09 Willard VanOrman

Quine has probably been the most influential th American philosopher of the 20 century His work spans over seven decades and covers many domains in philosophy He has made major contributions to the fields of logic and set theory philosophy of logic and mathematics philosophy of language philosophy of science epistemology and metaphysics Quine s first work in philosophy was in the field of logic His major contributions are the two set theoretic systems NF 1936 and ML 1940 1 These systems were alternatives to the type theory of Principia Mathematica or Zermelo s set theory and are still being studied by 2 mathematicians An indirect contribution to the field of logic is his strong resistance to modal logic Quine s objections to the notions of necessity and analyticity have influenced the development of modal logic Quine has had an enormous influence on philosophy of mathematics When Quine entered philosophy there was a discussion on the foundations of mathematics between the schools of intuitionism formalism and conventionalism Quine soon took issue with Carnap s conventionalism in Truth by convention 4 1936 Quine has never joined one of the other schools but has added new elements that are the basic ones of the 5 contemporary schools of nominalism platonism and structuralism Quine has long been in the shadow of Benacerraf and Putnam in this field At the moment there seems to be a renewed interest in Quine s work and most philosophers explicitly refer to Quine s work

Proceedings of the Boston Colloquium for the Philosophy of Science Marx William Wartofsky, Robert Sonné Cohen, 1969 *Explanatory Translation* V. Rantala, 2013-11-11 In this book Veikko Rantala makes a systematic attempt to understand cognitive characteristics of translation by bringing its logical pragmatic and hermeneutic features together and examining a number of scientific logical and philosophical applications The notion of translation investigated here is called explanatory but it is not a translation in the standard sense of the word since it admits of conceptual change Such translations can take various degrees of precision and therefore they can occur in contexts of different kinds from everyday discourse to literary texts to scientific change The book generalizes some earlier approaches to translation especially the one presented in David Pearce s monograph Roads to Commensurability Rantala argues that the notion has something in common with Thomas Kuhn s earlier conception of scientific change and his views of language learning but it can be used to go beyond Kuhn s well known ideas and challenge his criticism concerning the import of the correspondence relation

Reuniting the Antipodes - Constructive and Nonstandard Views of the Continuum Peter Schuster, Ulrich Berger, Horst Osswald, 2013-03-14 At first glance Robinson s original form of nonstandard analysis appears nonconstructive in essence because it makes a rather unrestricted use of classical logic and set theory and in particular of the axiom of choice Recent developments however have given rise to the hope that the distance between constructive and nonstandard mathematics is actually much smaller than it appears So the time was ripe for the first meeting dedicated simultaneously to both ways of doing mathematics and to the current and future reunion of these seeming opposites

Consisting of peer reviewed research and survey articles written on the occasion of such an event this volume offers views of the continuum from various standpoints Including historical and philosophical issues the topics of the contributions range from the foundations the practice and the applications of constructive and nonstandard mathematics to the interplay of these areas and the development of a unified theory

Abductive Reasoning Atocha Aliseda, 2006-02-16 *Abductive Reasoning* Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning providing logical foundations and a rich sample of pertinent applications Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision

Internal Logic Y. Gauthier, 2013-03-09 Internal logic is the logic of content The content is here arithmetic and the emphasis is on a constructive logic of arithmetic arithmetical logic Kronecker s general arithmetic of forms polynomials together with Fermat s infinite descent is put to use in an internal consistency proof The view is developed in the context of a radical arithmetization of mathematics and logic and covers the many faceted heritage of Kronecker s work which includes not only Hilbert but also Frege Cantor Dedekind Husserl and Brouwer The book will be of primary interest to logicians philosophers and mathematicians interested in the foundations of mathematics and the philosophical implications of constructivist mathematics It may also be of interest to historians since it covers a fifty year period from 1880 to 1930 which has been crucial in the foundational debates and their repercussions on the contemporary scene

The Metaphysics of Science Craig Dilworth, 2013-04-17 The roots of this work lie in my earlier book *Scientific Progress* which first appeared in 1981 One of its topics the distinction between scientific laws and theories is there treated with reference to the same distinction as drawn by N R Campbell in his *Physics The Elements* Shortly after completing *Scientific Progress* I read Rom Harré s *The Principles of Scientific Thinking* in which the concept of theory is even more clearly delineated than in Campbell being directly connected to the notion of a model as it was in my book In subsequent considerations regarding science Harré s work thus became my main source of inspiration with regard to theories while Campbell s remained my main source with respect to empiricallaws Around the same time I also read William Whewell s *Philosophy of the Inductive Sciences* In this

work Whewell depicts principles as playing a central role in the formation of science and conceives of them in much the same way as Kant conceives of fundamental synthetic a priori judgements The idea that science should have principles as a basic element immediately made sense to me and from that time I have thought of science in terms of laws theories and principles

Signs of Logic Ahti-Veikko Pietarinen, 2006-08-25 Charles Sanders Peirce 1839 1914 the principal subject of this book was one of the most profound and prolific thinkers and scientists to have come out of the United States His pragmatic logic and scientific methodology largely represent the application of interactive and intercommunicative triadic processes best viewed as strategic and dialogic conceptualisations of logical aspects of thought reasoning and action These viewpoints also involve pragmatic issues in communicating linguistic signs and are unified in his diagrammatic logic of existential graphs The various game theoretic approaches to the semantics and pragmatics of signs and language to the theory of communication and to the evolutionary emergence of signs provide a contemporary toolkit the relevance of which Peirce envisioned to a wondrous extent This work sheds considerable new light on these and other aspects of Peirce's philosophy and his pragmatic theory of meaning Many of his most significant writings in this context reflect his later thinking covering roughly the last 15 20 years of his life and they are still unpublished Drawing comprehensively from his unpublished manuscripts the book offers a fresh and rich picture of this remarkable man's original involvement with logical aspects of thought in action

Philosophy of Chemistry Davis Baird, Eric Scerri, Lee McIntyre, 2011-09-01 This comprehensive volume marks a new standard in scholarship in the emerging field of the philosophy of chemistry Philosophers chemists and historians of science ask some fundamental questions about the relationship between philosophy and chemistry

Formal Ontology and Conceptual Realism Nino B. Cocchiarella, 2007-09-05 Theories about the ontological structure of the world have generally been described in informal intuitive terms This book offers an account of the general features and methodology of formal ontology The book defends conceptual realism as the best system to adopt based on a logic of natural kinds By formally reconstructing an intuitive informal ontological scheme as a formal ontology we can better determine the consistency and adequacy of that scheme

Attitudes and Changing Contexts Robert van Rooij, 2006-03-30 In this book the author defends a unified externalist account of propositional attitudes and reference and formalizes this view within possible world semantics He establishes a link between philosophical analyses of intentionality and reference and formal semantic theories of discourse representation and context change Stalnakerian diagonalization plays an important role here Anaphora are treated as referential expressions while presupposition is seen as a propositional attitude The relation between belief change and the semantic analyses of conditional sentences and evidential knowledge and belief desire propositional attitudes is discussed extensively
