Proceedings of the second scandinavian logic symposium J. E. Fenstad, 1971 **Combinators, λ -Terms and Proof Theory** S. Stenlund, 2012-12-06 The aim of this monograph is to present some of the basic ideas and results in pure combinatory logic and their applications to some topics in proof theory and also to present some work of my own Some of the material in chapter 1 and 3 has already appeared in my notes Introduction to Combinatory Logic It appears here in revised form since the presentation in my notes is inaccurate in several respects I would like to express my gratitude to Stig Kanger for his invaluable advice and encouragement and also for his assistance in a wide variety of matters concerned with my study in Uppsala I am also indebted to Per Martin Lf for many valuable and instructive conversations As will be seen in chapter 4 and 5 I also owe much to the work of Dag Prawitz and W W Tait My thanks also to Craig McKay who read the manuscript and made valuable suggestions I want however to emphasize that the shortcomings that no doubt can be found are my sole responsibility Uppsala February 1972 Twenty Five Years of Constructive Type Theory Giovanni Sambin, Jan M. Smith, 1998-10-15 Per Martin Lf's work on the development of constructive type theory has been of huge significance in the fields of logic and the foundations of mathematics It is also of broader philosophical significance and has important applications in areas such as computing science and linguistics This volume draws together contributions from researchers whose work builds on the theory developed by Martin Lf over the last twenty five years As well as celebrating the anniversary of the birth of the subject it covers many of the diverse fields which are now influenced by type theory It is an invaluable record of areas of current activity but also contains contributions from N G de Bruijn and William Tait both important figures in the early development of the subject Also published for the first time is one of Per Martin Lf's earliest papers *Labelled Non-Classical Logics* Luca Viganò, 2013-04-17 I am very happy to have this opportunity to introduce Luca Viganò's book on Labelled Non Classical Logics I put forward the methodology of labelled deductive systems to the participants of Logic Colloquium 90 Labelled Deductive systems a Position Paper In J Oikkonen and J Vaananen editors Logic Colloquium 90 Volume 2 of Lecture Notes in Logic pages 66 68 Springer Berlin 1993 in an attempt to bring labelling as a recognised and significant component of our logic culture It was a response to earlier isolated uses of labels by various distinguished authors as a means to achieve local proof theoretic goals Labelling was used in many different areas such as resource labelling in relevance logics prefix tableaux in modal logics annotated logic programs in logic programming proof tracing in truth maintenance systems and various side annotations in higher order proof theory arithmetic and analysis This widespread local use of labels was an indication of an underlying logical pattern namely the simultaneous side by side manipulation of several kinds of logical information It was clear that there was a need to establish the labelled deductive

systems methodology Modal logic is one major area where labelling can be developed quickly and systematically with a view of demonstrating its power and significant advantage In modal logic the labels can play a double role

Foundations of Trusted Autonomy Hussein A. Abbass, Jason Scholz, Darryn J. Reid, 2018-01-15 This book establishes the foundations needed to realize the ultimate goals for artificial intelligence such as autonomy and trustworthiness Aimed at scientists researchers technologists practitioners and students it brings together contributions offering the basics the challenges and the state of the art on trusted autonomous systems in a single volume The book is structured in three parts with chapters written by eminent researchers and outstanding practitioners and users in the field The first part covers foundational artificial intelligence technologies while the second part covers philosophical practical and technological perspectives on trust Lastly the third part presents advanced topics necessary to create future trusted autonomous systems The book augments theory with real world applications including cyber security defence and space

Perspectives of System Informatics Alexander K. Petrenko, Andrei Voronkov, 2018-01-17 This book constitutes the refereed proceedings of the 11th International Andrei P Ershov Informatics Conference PSI 2017 held in Moscow Russia in June 2017 The 31 full papers presented in this volume were carefully reviewed and selected from 57 submissions The papers cover various topics related to the foundations of program and system development and analysis programming methodology and software engineering and information technologies

The Logical Writings of Karl Popper David Binder, Thomas Piecha, Peter Schroeder-Heister, 2022-08-07 This open access book is the first ever collection of Karl Popper's writings on deductive logic Karl R Popper 1902 1994 was one of the most influential philosophers of the 20th century His philosophy of science falsificationism and his social and political philosophy open society have been widely discussed way beyond academic philosophy What is not so well known is that Popper also produced a considerable work on the foundations of deductive logic most of it published at the end of the 1940s as articles at scattered places This little known work deserves to be known better as it is highly significant for modern proof theoretic semantics This collection assembles Popper's published writings on deductive logic in a single volume together with all reviews of these papers It also contains a large amount of unpublished material from the Popper Archives including Popper's correspondence related to deductive logic and manuscripts that were almost finished but did not reach the publication stage All of these items are critically edited with additional comments by the editors A general introduction puts Popper's work into the context of current discussions on the foundations of logic This book should be of interest to logicians philosophers and anybody concerned with Popper's work

The Mathematical and Philosophical Legacy of Alexander Grothendieck Marco Panza, Daniele C. Struppa, Jean-Jacques Szczeciniarz, 2025-01-21 Alexander Grothendieck is often considered one of the greatest mathematicians of the twentieth century if not all time and his unique vision continues to impact and inspire many fields and researchers today Utilizing a multidisciplinary approach this edited volume explores the profound influence his work and ideas have had not only on mathematics but also on logic and philosophy Chapters are

written by international scholars and many were inspired by talks given at the conference Grothendieck A Multifarious Giant at Chapman University May 24-28 2022 Some chapters are written from a historical perspective and discuss the development of the main themes that characterized Grothendieck's work Others are more mathematical in nature analyzing and extending some of his more relevant and obscure results that are still not well understood Philosophical implications and applications in logic are the subjects of other chapters This volume will be of interest not only to mathematicians working in algebraic geometry category theory and other areas to which Grothendieck contributed but also to philosophers logicians and historians of science

Argumentation E.M. Barth, J.L. Martens, 1982-01-01 The contributions in the first part Re modelling logic of this volume take account of formal logic in the theory of rational argumentation Part two contains papers that distinguish the various dialogue games for logics in terms of rights and obligations of the players The authors following in the third section study the interaction between participants in a dialogue Here the tools of the logician are used for the wider purpose of studying the nature of dialogue The fourth section concerns modes of argumentation that are actually found in philosophical texts from earlier centuries To be followed by contributions in Part five that may be read as attempts to retrieve what was left of the spirit of criticism and debate in philosophy after the onslaught of Cartesianism and idealism

Reflections on the Foundations of Mathematics Wilfried Sieg, Richard Sommer, Carolyn Talcott, 2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the fifteenth publication in the Lecture Notes in Logic series collects papers presented at the symposium Reflections on the Foundations of Mathematics held in celebration of Solomon Feferman's 70th birthday The Feferfest at Stanford University California in 1988 Feferman has shaped the field of foundational research for nearly half a century These papers reflect his broad interests as well as his approach to foundational research which emphasizes the solution of mathematical and philosophical problems There are four sections covering proof theoretic analysis logic and computation applicative and self applicative theories and philosophy of modern mathematical and logic thought

Advances in Proof-Theoretic Semantics Thomas Piecha, Peter Schroeder-Heister, 2015-10-24 This volume is the first ever collection devoted to the field of proof theoretic semantics Contributions address topics including the systematics of introduction and elimination rules and proofs of normalization the categorial characterization of deductions the relation between Heyting's and Gentzen's approaches to meaning knowability paradoxes proof theoretic foundations of set theory Dummett's justification of logical laws Kreisel's theory of constructions paradoxical reasoning and the defence of model theory The field of proof theoretic semantics has existed for almost 50 years but the term itself was proposed by Schroeder Heister in the 1980s Proof theoretic semantics explains the meaning of linguistic expressions in general and of logical constants in particular in terms of the notion of proof This volume emerges from presentations at the Second International Conference on Proof Theoretic

Semantics in Tbingen in 2013 where contributing authors were asked to provide a self contained description and analysis of a significant research question in this area The contributions are representative of the field and should be of interest to logicians philosophers and mathematicians alike Theoretical Aspects of Object-oriented Programming Carl A.

Gunter, John C. Mitchell, 1994 Although the theory of object oriented programming languages is far from complete this book brings together the most important contributions to its development to date focusing in particular on how advances in type systems and semantic models can contribute to new language designs The fifteen chapters are divided into five parts Objects and Subtypes Type Inference Coherence Record Calculi and Inheritance The chapters are organized approximately in order of increasing complexity of the programming language constructs they consider beginning with variations on Pascal and Algol like languages developing the theory of illustrative record object models and concluding with research directions for building a more comprehensive theory of object oriented programming languages Part I discusses the similarities and differences between objects and algebraic style abstract data types and the fundamental concept of a subtype Parts II IV are concerned with the record model of object oriented languages Specifically these chapters discuss static and dynamic semantics of languages with simple object models that include a type or class hierarchy but do not explicitly provide what is often called dynamic binding Part V considers extensions and modifications to record object models moving closer to the full complexity of practical object oriented languages Carl A Gunter is Professor in the Department of Computer and Information Science at the University of Pennsylvania John C Mitchell is Professor in the Department of Computer Science at Stanford University

Logics of Programs Rohit Parikh, 1985-06 Aristotle and Logical Theory Jonathan Lear, 1980-05-08 Aristotle was the first and one of the greatest logicians He not only devised the first system of formal logic but also raised many fundamental problems in the philosophy of logic In this book Dr Lear shows how Aristotle s discussion of logical consequence validity and proof can contribute to contemporary debates in the philosophy of logic No background knowledge of Aristotle is assumed *New Frontiers in Artificial Intelligence* Hiromitsu Hattori, Takahiro Kawamura, Tsuyoshi
