Barrier Systems for Environmental Contaminant Containment and Treatment Calvin C. Chien, Hilary I.

Inyang, Lorne G. Everett, 2005-10-31 Containment and permeable reactive barriers have come full circle as an acceptable environmental control technology during the past 30 years As interest shifted back toward containment in the 1990s the industry found itself relying largely on pre 1980s technology Fortunately in the past 10 years important advances have occurred in several areas

Index of Conference Proceedings British Library. Document Supply Centre, 1999 *Electrical & Electronics Abstracts*, 1997 *Comparative Risk Assessment and Environmental Decision Making* Igor Linkov, Abou Bakr Ramadan, 2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and

has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

risk-informed decision-making processes Enrico Zio,Nicola Pedroni,2012-10-01 The authors introduce the general concepts definitions and issues related to the use of Risk informed decision making RIDM These are structured processes which assist decision makers when faced with high impact complex decisions involving multiple objectives and the presence of uncertainty They aim to ensure that decisions between competing alternatives are taken with an awareness of the risks associated with each option and that all attributes of a decision are considered in an integrated manner Motivations for the use of these techniques as a complement to more traditional deterministic approaches to risk assessment are provided The RIDM processes adopted by NASA and by the US Nuclear Regulatory Commission are described in detail with an analysis of commonalities and differences in approach *Proceedings of the Topical Meeting on Site Characterization and Model*
