Proceedings Of The Workshop On Visual Behaviors:

Visual Behaviors, 1994 **Behavior-based Robotics** Ronald C. Arkin, 1998 Foreword by Michael Arbib This introduction to the principles design and practice of intelligent behavior based autonomous robotic systems is the first true survey of this robotics field The author presents the tools and techniques central to the development of this class of systems in a clear and thorough manner Following a discussion of the relevant biological and psychological models of behavior he covers the use of knowledge and learning in autonomous robots behavior based and hybrid robot architectures modular perception robot colonies and future trends in robot intelligence The text throughout refers to actual implemented robots and includes many pictures and descriptions of hardware making it clear that these are not abstract simulations but real machines capable of perception cognition and action

Research In Computer And Robot Vision Colin Archibald, Paul Kwok, Ulrich Gabbert, 1995-02-28 Research in Computer and Robot Vision is directed toward researchers and graduate students in the field of computer vision A broad spectrum of recent research is presented including sensing and navigation for mobile robots the extraction of lines curves surfaces and skeletons from intensity images and range images human motion and feature extraction Three applied research projects are presented on the topics of handwriting recognition automatic understanding of technical drawings and the collection and interpretation of 3 D images for use in dentistry These papers dramatically illustrate the breadth of implications of the use of computer vision in industrial social and even medical arenas

Exploratory Vision Michael S. Landy, Laurence T. Maloney, Misha Pavel, 2012-12-06 Advances in sensing signal processing and computer technology during the past half century have stimulated numerous attempts to design general purpose machines that see These attempts have met with at best modest success and more typically outright failure The difficulties encountered in building working computer vision systems based on state of the art techniques came as a surprise Perhaps the most frustrating aspect of the problem is that machine vision systems cannot deal with numerous visual tasks that humans perform rapidly and effortlessly In reaction to this perceived discrepancy in performance various researchers notably Marr 1982 suggested that the design of machine vision systems should be based on principles drawn from the study of biological systems This neuro morphic or anthropomorphic approach has proven fruitful the use of pyramid multiresolution image representation methods in image compression is one example of a successful application based on principles primarily derived from the study of biological vision systems It is still the case however that the performance of computer vision systems falls far short of that of the natural

systems since they are intended to mimic suggesting that it is time to look even more closely at the remaining differences between artificial and biological vision systems

Tsotsos, 2021-06-22 The derivation exposition and justification of the Selective Tuning model of vision and attention Although William James declared in 1890 Everyone knows what attention is today there are many different and sometimes opposing views on the subject This fragmented theoretical landscape may be because most of the theories and models of attention offer explanations in natural language or in a pictorial manner rather than providing a quantitative and unambiguous statement of the theory They focus on the manifestations of attention instead of its rationale In this book John Tsotsos develops a formal model of visual attention with the goal of providing a theoretical explanation for why humans and animals must have the capacity to attend He takes a unique approach to the theory using the full breadth of the language of computation rather than simply the language of mathematics as the formal means of description The result the Selective Tuning model of vision and attention explains attentive behavior in humans and provides a foundation for building computer systems that see with human like characteristics The overarching conclusion is that human vision is based on a general purpose processor that can be dynamically tuned to the task and the scene viewed on a moment by moment basis Tsotsos offers a comprehensive up to date overview of attention theories and models and a full description of the Selective Tuning model confining the formal elements to two chapters and two appendixes The text is accompanied by more than 100 illustrations in black and white and color additional color illustrations and movies are available on the book's Web site
