Chen, Jacky Akoka, Hannu Kangassalu, Bernhard Thalheim, 2003-05-21 This volume contains a collection of selected papers presented at the Symposium on Conceptual Modeling which was held in Los Angeles California on December 2 th 1997 immediately before the 16 International Conference on Conceptual Modeling ER 97 which was held at UCLA A total of eighteen papers were selected for inclusion in this volume These papers are written by experts in the conceptual modeling area and represent the most current thinking of these experts This volume also contains the summaries of three workshops that were held on 6 7 December 1997 immediately after the ER 97 conference at UCLA The topics of these three workshops are Behavioral Modeling Conceptual Modeling in Multimedia Information Seeking What Is the Role of Cognition in Conceptual Modeling Since these topics are not only very important but also very timely we think it is appropriate to include the summary of these three workshops in this volume Those readers interested in further investigating topics related to the three workshops can either look up the individual paper published on the Web or contact the authors directly The summary paper by Chen at the beginning of this volume also includes the summary of several interesting speeches at the Symposium Discrete-Event Modeling and Simulation Gabriel A. Wainer, Pieter J. Mosterman, 2018-09-03 Collecting the work of the foremost scientists in the field Discrete Event Modeling and Simulation Theory and Applications presents the state of the art in modeling discrete event systems using the discrete event system specification DEVS approach It introduces the latest advances recent extensions of formal techniques and real world examples of various applications The book covers many topics that pertain to several layers

of the modeling and simulation architecture It discusses DEVS model development support and the interaction of DEVS with other methodologies It describes different forms of simulation supported by DEVS the use of real time DEVS simulation the relationship between DEVS and graph transformation the influence of DEVS variants on simulation performance and interoperability and composability with emphasis on DEVS standardization The text also examines extensions to DEVS new formalisms and abstractions of DEVS models as well as the theory and analysis behind real world system identification and control To support the generation and search of optimal models of a system a framework is developed based on the system entity structure and its transformation to DEVS simulation models In addition the book explores numerous interesting examples that illustrate the use of DEVS to build successful applications including optical network on chip construction building design process control workflow systems and environmental models A one stop resource on advances in DEVS theory applications and methodology this volume offers a sampling of the best research in the area a broad picture of the DEVS landscape and trend setting applications enabled by the DEVS approach It provides the basis for future research discoveries and encourages the development of new applications

and networking are presented We believe that this volume will serve as a reference for the students researchers and industry practitioners working in or are interested in joining interdisciplinary works in the areas of intelligent decision systems using emergent distributed computing paradigms It will also allow newcomers to grasp key concerns and potential solutions on the selected topics

Agents and Peer-to-Peer Computing Gianluca Moro,Sonia Bergamaschi,2005-11-04 Peer to peer P2P computing is attracting enormous media attention spurred by the popularity of file sharing systems such as Napster Gnutella and Morpheus The peers are autonomous or as some call them first class citizens P2P networks are emerging as a new distributed computing paradigm for their potential to harness the computing power of the hosts composing the network and make their under utilized resources available to others Although researchers working on distributed computing multiagent systems databases and networks have been using similar concepts for a long time it is only recently that papers motivated by the current P2P paradigm have started appearing in high quality conferences and workshops Research in agent systems in particular appears to be most relevant because since their inception multiagent systems have always been thought of as networks of peers The multiagent paradigm can thus be superimposed on the P2P architecture where agents embody the description of the task environments the decision support capabilities the collective behavior and the interaction protocols of each peer The emphasis in this context on decentralization user autonomy ease and speed of growth that gives P2P its advantages also leads to significant potential problems Most prominent among these problems are coordination the ability of an agent to make decisions on its own actions in the context of activities of other agents and scalability the value of the P2P systems lies in how well they scale along several dimensions including complexity heterogeneity of peers robustness traffic redistribution and so on This volume presents the fully revised papers presented at the Third International Workshop on Agents and Peer to Peer Computing AP2PC 2004 held in New York City on July 19 2004 in the context of the Third International Joint Conference on Autonomous Agents and Multi Agent Systems AAMAS 2004 The volume is organized in topical sections on P2P networks and search performance emergent communities and social
