

Chapter 10 The Cell Cycle

The cell cycle is the process by which a cell grows and divides. It consists of several stages, including interphase, prophase, metaphase, anaphase, and telophase. During interphase, the cell grows and replicates its DNA. Prophase is the first stage of mitosis, where the chromosomes condense and the nuclear envelope breaks down. Metaphase is the second stage, where the chromosomes align in the center of the cell. Anaphase is the third stage, where the sister chromatids separate and move to opposite poles. Telophase is the final stage, where the nuclear envelope reforms and the cell begins to divide.

Graph Algorithms and Applications I published in March 2002 contains Volumes 1-3 of JGAA. JGAA is a peer reviewed scientific journal devoted to the publication of high quality research papers on the analysis, design, implementation and applications of graph algorithms. Areas of interest include computational biology, computational geometry, computer graphics, computer aided design, computer and interconnection networks, constraint systems, databases, graph drawing, graph embedding and layout, knowledge representation, multimedia, software engineering, telecommunications, networks, user interfaces and visualization and VLSI circuit design. The journal is supported by distinguished advisory and editorial boards, has high scientific standards and takes advantage of current electronic document technology. The electronic version of JGAA is available on the Web at <http://www.cs.brown.edu/publications/jgaa>.

Graph Algorithms and Applications 2 presents contributions from prominent authors and includes selected papers from the Dagstuhl Seminar on Graph Algorithms and Applications and the Symposium on Graph Drawing in 1998. All papers in the book have extensive diagrams and offer a unique treatment of graph algorithms focusing on the important applications.

Computer Vision and Computer Graphics. Theory and Applications José Braz, Alpesh Kumar Ranchordas, Hélder J. Araújo, Joao Madeiras Pereira, 2008-12-05. This book includes selected papers from VISIGRAPP 2007, the Joint Conference on Computer Vision and Computer Graphics comprising two component conferences, namely the International Conference on Computer Vision Theory and Applications (VISAPP) and the International Conference on Computer Graphics Theory and Applications (GRAPP), held in Barcelona, Spain during March 8-11, 2007. We received quite a high number of paper submissions, 382 in total, for both conferences. We had contributions from more than 50 countries in all five continents. This confirms the success and global dimension of these jointly organized conferences. After a rigorous double blind evaluation method, a total of 78 submissions were accepted as full papers. From those, 18 got selected for inclusion in this book. To ensure the scientific quality of the contributions, these were selected from papers that were evaluated with the highest scores by the VISIGRAPP Program Committee members, and then they were extended and revised by the authors. Special thanks go to all contributors and referees without whom this book would not have been possible. VISIGRAPP 2007 included four invited keynote lectures presented by internationally recognized researchers. The presentations represented an important contribution to increasing the overall quality of the conference. We would like to express our appreciation to all invited keynote speakers in alphabetical order: Jake K. Aggarwal, The University of Texas at Austin, USA; Andrzej Gagalowicz, INRIA, France; Wolfgang Heidrich, University of British Columbia, Canada; Mel Slater, Universitat Politècnica de Catalunya, Spain.

Reliable Implementation of Real Number Algorithms: Theory and Practice Peter Hertling, Christoph M. Hoffmann, Wolfram Luther, Nathalie Revol, 2008-08-28. This book constitutes the revised papers of the International Seminar on Reliable Implementation of Real Number Algorithms held at Dagstuhl Castle, Germany, in January 2006. The Seminar was intended to stimulate an exchange of ideas between the different communities that deal with the problem of reliable implementation of real number algorithms. Topics included formal proofs, software libraries, systems and

platforms as well as computational geometry and solid modelling
