Federal Emergency Management Agency, 2001 *NEHRP Recommended Provisions (National Earthquake Hazards Reduction Program) for Seismic Regulations for New Buildings and Other Structures: Commentary* United States. Federal Emergency Management Agency, 2001 *Particle Damping Technology Based Structural Control* Zheng Lu, Sami F. Masri, Xilin Lu, 2020-03-27 This book presents a systematic introduction to particle damping technologies which can be used to effectively mitigate seismic induced and wind induced vibration in various structures Further it offers comprehensive information on the latest research advances e g a refined simulation model based on the discrete element method and a simplified simulation model based on equivalent principles It then intensively studies the vibration attenuation effects of particle dampers subjected to different dynamic loads in this context the book proposes a new damping mechanism and global measures that can be used to evaluate damping performance Moreover the book uses the shaking table test and wind tunnel test to verify the proposed simulation methods and their satisfactory damping performance is confirmed To facilitate the practical engineering application of this technology optimization design guidelines for particle impact dampers are also provided In closing the book offers a preliminary exploration of semi active particle damping technology which holds great potential for extension to other applications in which the primary system is subjected to non stationary excitations NEHRP Recommended Provisions for Seismic Regulations for New Buildings and Other Structures, Part 2 - Commentary, 2000 Edition, March 2001, 2001 **State of the Art Report on Seismic Design Requirements for Nonstructural Building Components** Long T. Phan, Andrew W.

Taylor,1998-03 Seismic design requirements for nonstructural building components of five major building codes including the 1994 Uniform Bldg Code the 1994 Standard Bldg Code the 1994 NEHRP Recommended Provisions for Seismic Regulations for New Buildings the New Zealand Bldg Code and the Japanese Bldg Code were reviewed in this study Comparisons of codes reveal wide variation in seismic force and displacement requirements both in terms of levels of stringency and levels of details The difference in seismic force requirements between the most and least stringent codes can be more than five times

Wind Wizard Siobhan Roberts,2012-11-25 How the father of wind

engineering helped make the world's most amazing buildings and bridges possible. With *Wind Wizard*, Siobhan Roberts brings us the story of Alan Davenport (1932–2009), the father of modern wind engineering, who investigated how wind navigates the obstacle course of the earth's natural and built environments and how, when not properly heeded, wind causes buildings and bridges to teeter, unduly sway with abandon, and even collapse. In 1964, Davenport received a confidential telephone call from two engineers requesting tests on a pair of towers that promised to be the tallest in the world. His resulting wind studies on New York's World Trade Center advanced the art and science of wind engineering with one pioneering innovation after another. Establishing the first dedicated boundary layer wind tunnel laboratory for civil engineering structures, Davenport enabled the study of the atmospheric region from the earth's surface to three thousand feet, where the air churns with turbulent eddies, the average wind speed increasing with height. The boundary layer wind tunnel mimics these windy, marbled striations in order to test models of buildings and bridges that inevitably face the wind when built. Over the years, Davenport's revolutionary lab investigated and improved the wind worthiness of the world's greatest structures, including the Sears Tower, the John Hancock Tower, Shanghai's World Financial Center, the CN Tower, the iconic Golden Gate Bridge, the Bronx Whitestone Bridge, the Sunshine Skyway, and the proposed crossing for the Strait of Messina linking Sicily with mainland Italy. Chronicling Davenport's innovations by analyzing select projects, this popular science book gives an illuminating behind-the-scenes view into the practice of wind engineering and insight into Davenport's steadfast belief that there is neither a structure too tall nor too long as long as it is supported by sound wind science.
