Radiation Curing in Polymer Science and Technology-Volume II J. P. Fouassier, J. F. Rabek, 1993-07-15 The demand for photoinitiators has been steadily increasing since benzoin ethers latent radical sources activated by UV light were first industrially employed in particle board finishing in the 1960s Among the factors contributing to the continuing success of photoinitiators are the widespread adoption of dry coatings which eliminate the environmental problems associated with solution polymerisation and the development of new printing and resist applications All of the early commercial photoinitiators were organic compounds primarily derivatives of benzil or acetophenone But as research in organo metallic chemistry gained momentum the potential advantages of organo metallic complexes as photoinitiators became evident Not only would the use of metal based compounds allow polymerisation to be initiated by lower energy and therefore more economical visible light but the absorption characteristics and reactivity of these complexes could be fine tuned to fit the specific application requirements by manipulation of the metal ligands In fact the recent commercialisation of the first two organo metallic photoinitiators a titanocene see p 347 and a cyclopentadienyl arene iron II salt see p 359 bears testimony to the mounting importance and versatility of metal complexes as latent sources of radicals and or Lewis acids The purpose of this chapter is to provide an overview of photopolymerisation with metal species whether they be metal ions inorganic or organo metallic complexes Radiation Curing in Polymer Science and Technology: Photoinitiating systems Jean-Pierre Fouassier, 1993 The aim of this four volume multi author reference work is to provide a comprehensive guide to the radiation curing field Volume Two is devoted to the chemistry of photoinitiators presenting and discussing basic concepts and the

reactivity of typical systems      **Photoinitiators** Jean-Pierre Fouassier, Jacques Lalevée, 2021-03-08 Photoinitiators A comprehensive text that covers everything from the processes and mechanisms to the reactions and industrial applications of photoinitiators Photoinitiators offers a wide ranging overview of existing photoinitiators and photoinitiating systems and their uses in ever growing green technologies The authors noted experts on the topic provide a concise review of the backgrounds in photopolymerization and photochemistry explain the available structures and examine the excited state properties involved mechanisms and structure reactivity and efficiency relationships The text also contains information on the latest developments and trends in the design of novel tailor made systems The book explores the role of current systems in existing and emerging processes and applications Comprehensive in scope it covers polymerization of thick samples and in shadow areas polymerization under LEDs NIR light induced thermal polymerization photoinitiators for novel specific and improved properties and much more Written by an experienced and internationally renowned team of authors this important book Provides detailed information about excited state processes mechanisms and design of efficient photoinitiator systems Discusses the performance of photoinitiators of polymerization by numerous examples of reactions and application Includes information on industrial applications Presents a review of current developments and challenges Offers an introduction to the background information necessary to understand the field The role played by photoinitiators in a variety of different polymerization reactions Written for polymer chemists photochemists and materials scientists Photoinitiators will also earn a place in the libraries of photochemists seeking an authoritative one stop guide to the processes mechanisms and industrial applications of photoinitiators      **Photocured Materials** Atul Tiwari, Alexander Polykarpov, 2014-11-26 The materials technologies based on photocuring are gaining momentum and this will be the first book to provide an in depth focus on the subject      **Handbook of Aluminum Bonding Technology and Data** J.
