Kaplyanskii, R.M. McFarlane, 2012-12-02 Spectroscopy of Crystals Containing Rare Earth Ions contains chapters on some key problems selected from a broad range of spectroscopic studies of RE activated solids including both crystalline and glassy materials Progress in crystal field theory is surveyed an area which is basic to our understanding of the energy levels The treatment of dynamical properties includes studies of coherence phenomena in isolated ions energy transfer between ions and co operative phenomena associated with ion ion and ion lattice interactions In addition the role of electron spins and nuclear spins is studied by light scattering and double resonance techniques The presence of inhomogeneous broadening of spectral lines is observed and studied in many contexts leading to new insights into general problems of the disordered state Considerable attention is devoted to describing new experimental techniques whose development is of prime importance for progress in the spectroscopy of RE activated solids Many of these rely on the development and application of tunable lasers At the moment this is a very active field of spectroscopy with more exciting developments likely to occur in the future

Handbook of fluorescence spectra of Aromatic Molecules Isadore Berlmán, 2012-12-02 Handbook of Fluorescence Spectra of Aromatic Molecules Second Edition describes the fluorescence and absorption spectra of about 200 aromatic compounds most of which fall into the following classes p oligophenylenes indole derivatives fluoranthene derivatives naphthalene derivatives biphenyl derivatives and biological stains Experiments with lasers and their relevance to fluorescence studies are included This handbook is comprised of seven chapters and begins with a historical overview of research into the fluorescence characteristics of compounds the methods and equipment used to measure fluorescence and elementary considerations concerning luminescence The format for the presentation of data pertaining to each compound covered in this text is described together with the equipment for exciting detecting and recording the spectrum of the emitted radiation The discussion then turns to the free electron model and presents general information on concepts such as chromophores planar and nonplanar molecules effects of planarity on fluorescence solvent and concentration effects and polarization The following chapters focus on compounds such as benzene and polycyclic hydrocarbons as well as some uses of fluorescent compounds
