INTRODUCTION

This manual will introduce C Programming Language techniques and concepts. The C Programming Language was the first common sense practical computer programming language. It is used widely today in industry and system programming. This manual teaches by using the analogy approach. This approach allows you to understand concepts by comparing the operation to common known principles. This makes it easier for you to understand and grasp new concepts. We also use the seeing approach. The words we use are carefully chosen so that you get a picture of what is happening. Visualization is a very powerful concept to understanding programming. Once you get the picture of what is happening then programming is much easier to understand. It is very important for you to visualize and see things as a picture rather than trying to understand, by reading and memorizing textbooks. Pictures are made up of words. This document does not cover all details of C programming but acts as a guide so that you can get started, right away with C programming. The main purpose of this document is to introduce and teach you C programming techniques. The reader is encouraged to have a textbook as a companion to look up important terms for clarification or for more in depth study. Good textbooks are:

Title	Author(s)	Publisher
The C Programming Language	Brian W. Kernighan , Denis M Ritchie	Prentice Hall
Programming in ANSI C	Ran Kumar, Rakesh Agrawal	West Publishing

PURPOSE OF PROGRAMMING LANGUAGES

The purpose of a programming language is to instruct a computer what you want it to do. In most cases of beginner programs, the computer tells the programmer what to do. Good programmers are in control of the computer operation. A typical computer program lets the user enter data from the keyboard, performs some calculation and then displays the results on a computer screen. Users can store input and output data on a file for future use. Important C keywords are introduced in **bold**. C language definitions are introduced in *violet italics*, programming statements are in *blue* and programming comments in *green*.

LESSONS AND ASSIGNMENTS

You should understand all the material and do all exercises in each lesson before attempting the next lesson. Course grades are (P) Pass, (G) Good and (E) Excellent. Excellent is awarded to students with outstanding programs that involve creativity and works of genius. Good is awarded to students that have exceptional working programs. Pass is awarded to students that have minimal working programs.
