Pricing Irrigation Water Yacov Tsur, 2010 As globalization links economies the value of a country's irrigation water becomes increasingly sensitive to competitive forces in world markets Water policy at the national and regional levels will need to accommodate these forces or water is likely to become undervalued The inefficient use of this resource will lessen a

country's comparative advantage in world markets and slow its transition to higher incomes particularly in rural households. While professionals widely agree on what constitutes sound water resource management they have not yet reached a consensus on the best ways of implementing policies. Policymakers have considered pricing water a debated intervention in many variations. Setting the price right some say may guide different types of users in efficient water use by sending a signal about the value of this resource. Aside from efficiency itself an important policy objective equity accessibility and implementation costs associated with the right pricing must be considered. Focusing on the examples of China Mexico Morocco South Africa and Turkey *Pricing Irrigation Water* provides a clear methodology for studying farm level demand for irrigation water. This book is the first to link the macroeconomics of policies affecting trade to the microeconomics of water demand for irrigation and in the case of Morocco to link these forces to the creation of a water user rights market. This type of market reform the contributors argue will result in growing economic benefits to both rural and urban households.

**Cost-Benefit Analysis of Groundwater Policy and Projects, with Case Studies** Charles Job, 2021-07-27. The competition for groundwater sources as a water supply reinforces the need for a strong economic rationale in decision making. Evaluating economic decisions in the context of total water management and life cycle water use is essential to making critical development and remediation choices. This revised volume provides fundamental economic and policy concepts related to groundwater discusses important factors in life cycle cost benefit evaluation and explains triple bottom line analysis for different groundwater projects. It includes new and updated case studies on groundwater issues with solutions for a range of situations based on economic data. **FEATURES OF THIS VOLUME** Provides an understanding for the fundamental economic approaches to groundwater policy and project evaluation. Incorporates life cycle cost benefit approaches in a triple bottom line framework. Includes new case studies on the economics of health protection managed aquifer recharge local versus regional supply and strategic life cycle analysis. Water policy is an important topic on the agenda of the international community and efficiency and equity in the allocation of water have emerged as important factors to be considered. Water pricing can be used to mitigate both the quantity and quality dimensions of water scarcity. This paper reviews partial equilibrium models and general equilibrium models that are relevant to irrigation water management issues. The most widely discussed issues in these models are water markets and water pricing. The interrelationships between economic cultural social and political aspects that are related to water policy make it

difficult to provide a comprehensive policy analysis General equilibrium models of irrigation water management allow incorporation of both the irrigation sector and the other sectors in the economy and analysis of policies affecting each of them and the interaction between them In addition to being able to address sector and household specifications production factors time horizon pricing policies and institutions such as water markets general equilibrium models allow the analysis of the impact of water policies on equity and poverty alleviation The authors conclude that although there has been a significant increase in efforts to analyze water related problems analytical and empirical research in the field is still deficient and more effort is needed to address them
