Securing Web Services With Ws Security Demystifying Ws Security Ws Policy Saml Xml Signature And Xml Encryption:

Securing Web Services with WS-Security Jonathan B. Rosenberg,David L. Remy,2004 You know how to build Web service applications using XML SOAP and WSDL but can you ensure that those applications are secure Standards development groups such as OASIS and W3C have released several specifications designed to provide security but how do you combine them in working applications **Web Services Security Development and Architecture: Theoretical and Practical Issues** Guti□rrez, Carlos A.,Fern ndez-Medina, Eduardo,Piattini, Mario,2010-01-31 This book s main objective is to present some of the key approaches research lines and challenges that exist in the field of security in SOA systems Provided by publisher **Applied Cryptography for Cyber Security and Defense: Information Encryption and Cyphering** Nemati, Hamid R.,Yang, Li,2010-08-31 Applied Cryptography for Cyber Security and Defense Information Encryption and Cyphering applies the principles of cryptographic systems to real world scenarios explaining how cryptography can protect businesses information and ensure privacy for their networks and databases It delves into the specific security requirements within various emerging application areas and discusses procedures for engineering cryptography into system design and implementation Resource Optimization and Security for Cloud Services Kaiqi Xiong,2014-02-19 This book includes a study of trustworthiness percentile response time service availability and authentication in the networks between users and cloud service providers and at service stations or sites that may be owned by different service providers The first part of the book contains an analysis of percentile response time which is one of the most important SLA service level agreements metrics Effective and accurate numerical solutions for the calculation of the percentile response time in single class and multi class queueing networks are obtained Then the numerical solution is incorporated in a resource allocation problem Specifically the authors present an approach for the resource optimization that minimizes the total cost of computer resources required while preserving a given percentile of the response time In the second part the approach is extended to consider trustworthiness service availability and the percentile of response time in Web services These QoS metrics are clearly defined and their quantitative analysis provided The authors then take into account these QoS metrics in a trust based resource allocation problem in which a set of cloud computing resources is used by a service provider to host a typical Web services application for single class customer services and multipleclass customer services respectively Finally in the third part of the book a thorough performance evaluation of two notable public key cryptography based authentication techniques Public Key Cross Realm Authentication in Kerberos PKCROSS and Public Key Utilizing Tickets for Application Servers PKTAPP a k a KX 509 KCA is given in terms of computational and communication times The authors then demonstrate their performance difference using queuing networks PKTAPP has been proposed to address the scalability issue of PKCROSS However their in depth analysis of these two techniques shows that PKTAPP does not perform better than PKCROSS in a

large scale system Thus they propose a new public key cryptography based group authentication technique The performance analysis demonstrates that the new technique can scale better than PKCORSS and PKTAPP Business Enterprise, Process, and Technology Management: Models and Applications Shankararaman, Venky,Zhao, J. Critical Information Infrastructures Maitland Hyslop,2007-09-05 Resilience is an increasingly important concept and quality in today s world It is particularly important in the area of Critical Infrastructures It is crucial in the area of Critical Information Infrastructure This is because since the year 2000 man has been dependent on information and telecommunications systems for survival particularly in the Organization for Economic Cooperation and Development OECD countries and because all other Critical Inf structures depend upon to a greater or lesser extent Critical Information 1 2 Infrastructure Until probably the late 1980s it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might The fall of the Berlin Wall may have effectively ended the Cold War and with it a bipolar world but it brought globalization and a multipolar digital world in its wake Simply put a number of power vacuums were created and these have yet to be fully filled and settled In this New World many changes were afoot These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of globalization One of the biggest changes though is the use of digital technolo gy by the OECD countries This is on such a scale that these countries have become both dependent upon information technology and as individual 3 states largely irrelevant to the new global electronic economy 1 This adaptation of Maslow s hierarchy of needs is attributed to KPMG
