**Applying population-based threshold models to quantify and improve seed quality attributes** Prof Kent J. Bradford,Dr Pedro Bello,2022-07-25 Achieving rapid and uniform stand establishment in crops requires a combination of high quality seeds and appropriate environmental conditions In particular temperature and soil moisture or water potential are the major factors influencing germination in the field In this chapter we focus on the application of population based threshold PBT models to characterize seed germination time courses and how

environmental and technological inputs influence them Viewing seed quality as a product of the behavior of populations of individual seeds is critical for understanding the causes and consequences of poor performance Quantitatively characterizing seed population features enables their use in seed sorting and seed enhancement and provides phenotypes for use in research breeding conservation and restoration We believe that PBT models are essential tools to enable full utilization of new advances in seed technology to improve seed quality and enable successful stand establishment in agriculture or in natural settings

**The Nanotechnology Driven Agriculture** Swarnendu Roy,Akbar Hossain,2024-03-29 Nanotechnology is believed to accelerate our fight to sustain and enhance crop productivity for the ever increasing world population It has been reckoned as one of the safest and most cost efficient techniques to boost crop productivity in the future The ever increasing state of the art availability of various nanomaterials has allowed us to pursue their beneficial properties in agronomy Nanotechnology will help minimize the dependency on chemical fertilizers and existing crop production techniques that have already been exploited to their maximum potential Therefore in the present context it could well be realized that agriculture will be driven by nanotechnology in the future This book focuses on the application of nanotechnology for enhancing crop production through the application of nanofertilizers or nanocomposites Several avenues of nanotechnology are beneficial in improving crop productivity in a sustainable manner which has been presented in a comprehensive way The book also delves into the mechanistic view of nanoparticle functioning and its role in stress alleviation In addition the book presents some recent insights into the application of nanotechnology for post harvest management stress tolerance and usage as nanobiosensors Broadly the book will encompass the following advances in the field distinguishing it from other published volumes The salient features include Role of nanoparticles in improving abiotic stress tolerance in plants Role of nanoparticles in protection against pathogens and pests Mechanism of nanoparticle induced plant responses Synthesis and modification of nanoparticles to enhance their biological efficacy Prospects of nanofertilizers nanoformulations nanopesticides etc and their beneficial attributes This book therefore presents this emerging topic and the most recent innovations in this field for postgraduate students researchers and faculty members working in the fields of plant science microbiology biotechnology agricultural sciences etc

*Ensuring Food Security* Mirza Hasanuzzaman, Muhammad Suleman Tahir, Mohsin Tanveer, Adnan Noor Shah, 2023-12-03 This book provides a comprehensive summary of the recent advances in the biofortification of plants under climate change and how it affects food security globally. The need for mineral biofortification to eradicate or alleviate malnutrition through sustainable agriculture is also discussed. Biofortification of edible plants is considered the most appropriate approach to alleviate nutritional problems and nutrient deficiencies. In contrast, biofortification focuses on improving the nutritional content of the region's current agricultural biodiversity while preserving its habits and customs. Emphasis is also placed on recent advances and developments in omics, particularly metabolomics and related techniques to unravel the potential alterations in plants caused by biofortification. The book brings together eminent scientists to present the latest developments in the field. This timely publication addresses practical scenarios of bio-fortified food production and climate change. The book focuses on the methods, techniques, and environmental changes used to enhance and improve agricultural products. This book is one of the first to provide information on the use of modern biotechnologies to modify crops for health benefits. It also examines the mechanisms of the plant responses to genetically induced biofortification, the production and responses of fortified plants under climate change, and their effects on food security. The book will be useful for students and researchers, especially crop scientists, environmental scientists, biotechnologists, botanists, and agronomists, to understand the techniques and mechanisms of biofortification and responses of biofortified plants under climate change.
