

# Digital Technologies for Food Loss and Waste Prevention and Reduction in Agri-Food Supply Chains: A Systematic Literature Review and Research Agenda

Caterina Trevisan  and Marco Formentini 

**Abstract**—Despite the benefits resulting from the use of Industry 4.0 technologies in the agri-food sector, the adoption of digital technologies for preventing and/or reducing food loss and waste (FLW) across the agri-food supply chain is still under investigation. In fact, enhancing and optimizing agri-food supply chain operations through digital technologies would just represent a partial effort if FLW prevention and reduction are not effectively addressed. Although companies are starting to adopt digital technologies for eliminating FLW from their operations, the implementation process and the achieved results are generally presented at a superficial level and practical guidance is still missing. This systematic literature review contributes to theory by developing a framework analyzing the state-of-the-art of adoption of each Industry 4.0 technology across the agri-food supply chain, and providing a research agenda structured around the main themes of research design, digital technologies, contextual differences, governance, and sustainability. Eventually, the study also informs managers in the agri-food industry about the potential implementation of digital technologies for preventing and reducing FLW in across the agri-food supply chain.

**Index Terms**—Agri-food supply chain (AFSC), digital technologies, digitalization, food loss and waste (FLW), industry 4.0.

## I. INTRODUCTION

As a growing number of people is facing food insecurity and the global food systems have been severely tested by a combination of health crisis, climate-related issues, and conflicts, still too much food is lost or wasted throughout the AFSC. Between 25% and 50% of food produced does not reach the consumers, with the majority of losses occurring from the producers to the retailers point in the supply chain [1]. Wasting food has significant negative consequences on social, economic, and environmental sustainability: wasted food in landfills generates about 8%–10% of global greenhouse gas emissions [2], not to mention blue water footprint, land footprint, and biodiversity reduction [3]. Moreover, it leads to an economic cost of around 143 billion euros per year in the 28 European countries alone [4]. Halving per capita global food waste by 2030 is the objective of target 12.3 of UN sustainable development goal [5]; thus, reducing FLW represents a relevant and timely issue.

Several strategies of reducing FLW have been identified, depending also on the supply chain stages considered [6]. Despondi [1] individuates the adoption of technology as one key aspect for food loss reduction, especially in the upstream part of the supply chain. For instance, Industry 4.0 (I4.0) solutions, such as blockchain or IoT, allow the monitoring of the ambient conditions of food products from the harvest until the selling stage, thus detecting their deterioration stage and improving the operations along the entire AFSC [7], [8], [9]. Even in the downstream supply chain stages (i.e., consumption, food service, and food sharing), digital technologies are frequently adopted to avoid or reduce food waste, such as digital platforms

Idinopulos, Yonan, 2018-08-14 This volume on Religion and Reductionism grew out of a conference convened in November 1990 where the participants were asked to respond to the conceptual and methodological problem of reductionism in the academic study of religion The conference focused on the writings of Robert A Segal and his defence of reductionism and criticism of Mircea Eliade's non reductive interpretation of religion At the Miami conference some of the most important and enduring questions were raised 1 What is religion 2 What is religion and or religious meaning 3 How should religion be studied and taught 4 What are the possibilities and limits of social scientific analyses of religious phenomena 5 What is reductionism 6 What is anti reductionism These and other questions on religion and reductionism are widespread and invite serious consideration they help to illuminate the basic issues that are at the core of any study of the world's major religions

**Reductionism in the Philosophy of Science** Christian Sachse,2013-05-02 In contemporary philosophy of science ontological reductionism or the claim that everything that exists in the world is something physical is the consensus mainstream position Contrary to a widespread belief this book establishes that ontological and epistemological reductionism stand or fall together The author proposes a new strategy of conservative theory reduction that operates by means of the construction of functional sub concepts that are coextensional with physical concepts Thus a complete conservative reductionism is established that vindicates both the indispensable scientific character of the special sciences and their reducibility to physics The second part of the book works this strategy out using the example of classical and molecular genetics      Reduction - Abstraction - Analysis Alexander Hieke,Hannes Leitgeb,2013-05-02 Philosophers often have tried to either reduce disagreeable objects or concepts to more acceptable objects or concepts Reduction is regarded attractive by those who subscribe to an ideal of ontological parsimony But the topic is not just restricted to traditional metaphysics or ontology In the philosophy of mathematics abstraction principles such as Hume's principle have been suggested to support a reconstruction of mathematics by logical means only In the philosophy of language and the philosophy of science the logical

analysis of language has long been regarded to be the dominating paradigm and liberalized projects of logical reconstruction remain to be driving forces of modern philosophy This volume collects contributions comprising all those topics including articles by Alexander Bird Jaakko Hintikka James Ladyman Rohit Parikh Gerhard Schurz Peter Simons Crispin Wright and Edward N Zalta *Computer Science Handbook* Allen B.
