Brunner, 2012-12-06 With very few exceptions geodetic measurements use electro magnetic radiation in order to measure directions distances time delays and Doppler frequency shifts to name the main terrestrial and space observables Depending on the wavelength of the radiation and the purpose of the measurements the following parameters of the electromagnetic wave are measured amplitude phase angle of arrival polarisation and frequency Accurate corrections have to be applied to the measurements in order to take into account the effects of the intervening medium between transmitter and receiver The known solutions use atmospheric models special observation programs remote sensing techniques and instrumental methods It has been shown that the effects of the earth's atmospheric envelope present a fundamental limitation to the accuracy and precision of geodetic measurements This applies equally to terrestrial and space applications Instrumental accuracies are already below the atmospherically induced limitations and thus the accuracy demands on the geodetic refraction solutions are entering a new magnitude zone This monograph is primarily devoted to the properties of the atmospheric effects on various geodetic measurements and to their evaluation Ten review papers cover the most pressing aspects of the atmospheric effects on geodetic measurement These state of the art papers were written by eminent specialists in their respective research fields **Analysis of Refraction Influences in Geodesy Using Image Processing and Turbulence Models** Philipp Flach, 2001 **Third International Symposium on the North American Vertical Datum**, 1985 **Fundamentals of Astronomy** Cesare Barbieri, Ivano Bertini, 2020-11-24 Providing a broad overview of foundational concepts this second edition of *Fundamentals of Astronomy* covers topics ranging from spherical astronomy to reference systems and celestial mechanics to astronomical photometry and spectroscopy It expounds arguments of classical astronomy that provided the foundation for modern astrometry whilst presenting the latest results of the very long baseline interferometry VLBI radio technique optical interferometers and satellites such as Hipparcos and GAIA and recent resolutions of the IAU and IERS regarding precession forced and free nutation and Earth figure and rotation Concepts of general relativity are explored such as the advance of Mercury's perihelion light deflection and black holes in addition to the physical properties orbits and ephemerides of planets comets and asteroids with an extension to visual binary stars orbital reconstruction Extrasolar planets are also discussed with reference to radial velocity and transits measurements by ground and space telescopes Basic concepts of astronomical photometry spectroscopy and polarimetry are given including the influence of the terrestrial atmosphere Classical works such as Hipparchus are mentioned in order to provide a flavor of the

Problems of Solar and Stellar Oscillations D.O.

Gough, 2012-12-06 D O GOUGH Institute of Astronomy Madingley Road Cambridge U K IAU Colloquium 66 on Problems of Solar and Stellar Oscillations was held at the Crimean Astrophysical Observatory U S S R on 1 5 September 1981 The principal purpose of the colloquium was to study the low amplitude oscillations of the Sun and to a lesser extent to consider similar oscillations of other stars Much of the emphasis of the discussions was on the diagnostic value of the oscillations In the last few years we have become aware that the frequencies of the five minute modes of high degree which constitute the major component of the oscillations discovered twenty years ago by Evans and Michaud can be used to put quite tight bounds on the stratification of the solar convection zone These permit a calibration of solar models computed from so called standard evolution theory Modes of low degree penetrate beneath the convection zone to the core of the Sun and can in principle test the evolution theory Therefore there was considerable interest in the reports of the latest observations of such modes Broadly speaking those observations confirm the calibration by the high degree modes but there remain some systematic discrepancies that demand some revision of the theory Besides the gross aspects of evolution theory there are also more intricate details to be understood
