Elasticity ,1950 **The Jewish Mathematical Diaspora from Fascist Italy** Erika Luciano,2025-08-04 Delving into previously undisclosed archival sources this monograph offers a meticulously researched portrayal of Italian Jewish mathematicians amidst the turmoil sparked by the 1938 Italian Racial Laws Forced migration due to fascist anti Semitism saw the exodus of numerous Jewish intellectuals Highlighting the experiences of select academic mathematicians such as Guido Fubini Gino Fano Beniamino Segre Alessandro Terracini and others who fled Italy this work casts a light on a diaspora that presents unique aspects thanks to pre existing networks of international scientific solidarity Despite challenges stemming from language society and institutions their narratives reveal the profound human dimensions of adversity choice and camaraderie Suitable for scholars and students of 20th century history as well as a wider audience intrigued by Italy s complex past these pages offer invaluable insights into a dark chapter of the country s history **USAEC Translation List** U.S. Atomic Energy Commission,1965 *The Navier-Stokes Equations Theory and Numerical Methods* John G. Heywood,Kyuya Masuda,Reimund Rautmann,Vsevolod A. Solonnikov,2006-11-14 These proceedings contain original refereed research articles by specialists from many countries on a wide variety of aspects of Navier Stokes equations Additionally 2 survey articles intended for a general readership are included one surveys the present state of the subject via open problems and the other deals with the interplay between theory and numerical analysis **"Dig where you stand"** 4 Kristín Bjarnadóttir,Fulvia Furinghetti,Marta Menghini,Johan Prytz,Gert Schubring,2017-07-31 The Fourth International Conference on the History of Mathematics Education was hosted by Academy of Sciences and University of Turin Italy About 50 senior and junior researchers from 16 countries met for four days to talk about one topic the history of mathematics education In total 44 contributions were presented The themes were Ideas people and movements Transmission of ideas Teacher education Geometry and textbooks Textbooks changes and origins Curriculum and reform Teaching in special institutions and Teaching of geometry In this volume you find 28 of the papers all of them peer reviewed Since the first international

conference on the history of mathematics education the aim has been to develop this area of research to attract more researchers and provide new insights that stimulate further digging It is therefore very pleasing that so many new young researchers joined the conference presenting results from ongoing or recently finished PhD projects This makes us confident about a prosperous future of this research area as we look forward to the Fifth International Conference on the History of Mathematics Education to be held in Utrecht the Netherlands in September 2017 Previous international conferences on the history of mathematics education 2009 in Garaburri Iceland 2011 in Lisbon Portugal 2013 in Uppsala Sweden

John von Neumann and the Origins of Modern Computing William Aspray, 1990-12-07 William Aspray provides the first broad and detailed account of von Neumann's many different contributions to computing John von Neumann 1903-1957 was unquestionably one of the most brilliant scientists of the twentieth century He made major contributions to quantum mechanics and mathematical physics and in 1943 began a new and all too short career in computer science William Aspray provides the first broad and detailed account of von Neumann's many different contributions to computing These Aspray reveals extended far beyond his well known work in the design and construction of computer systems to include important scientific applications the revival of numerical analysis and the creation of a theory of computing Aspray points out that from the beginning von Neumann took a wider and more theoretical view than other computer pioneers In the now famous EDVAC report of 1945 von Neumann clearly stated the idea of a stored program that resides in the computer's memory along with the data it was to operate on This stored program computer was described in terms of idealized neurons highlighting the analogy between the digital computer and the human brain Aspray describes von Neumann's development during the next decade and almost entirely alone of a theory of complicated information processing systems or automata and the introduction of themes such as learning reliability of systems with unreliable components self replication and the importance of memory and storage capacity in biological nervous systems many of these themes remain at the heart of current investigations in parallel or neurocomputing Aspray allows the record to speak for itself He unravels an intricate sequence of stories generated by von Neumann's work and brings into focus the interplay of personalities centered about von Neumann He documents the complex interactions of science the military and business and shows how progress in applied mathematics was intertwined with that in computers William Aspray is Director of the Center for the History of Electrical Engineering at The Institute of Electrical and Electronics Engineers

Translations Register-index, 1970 [Integral Methods in Science and Engineering, Volume 1](#) Christian Constanda, Matteo Dalla Riva, Pier Domenico Lamberti, Paolo Musolino, 2017-09-08 This contributed volume contains a collection of articles on the most recent advances in integral methods The first of two volumes this work focuses on the construction of theoretical integral methods Written by internationally recognized researchers the chapters in this book are based on talks given at the Fourteenth International Conference on Integral Methods in Science and Engineering held July 25-29 2016 in Padova Italy A broad range of topics is addressed such as Integral equations

Homogenization Duality methods Optimal design Conformal techniques This collection will be of interest to researchers in applied mathematics physics and mechanical and electrical engineering as well as graduate students in these disciplines and to other professionals who use integration as an essential tool in their work **Topics in the Foundation of Statistics**

B.C. van Fraassen,1997-02-28 Foundational research focuses on the theory but theories are to be related also to other theories experiments facts in their domains data and to their uses in applications whether of prediction control or explanation A theory is to be identified through its class of models but not so narrowly as to disallow these roles The language of science is to be studied separately with special reference to the relations listed above and to the consequent need for resources other than for theoretical description Peculiar to the foundational level are questions of completeness specifically in the representation of measurement and of interpretation a topic beset with confusions of truth and evidence and with inappropriate metalinguistic abstraction **Mathematicians in Bologna 1861-1960** Salvatore

COEN,2012-05-11 The scientific personalities of Luigi Cremona Eugenio Beltrami Salvatore Pincherle Federico Enriques Beppo Levi Giuseppe Vitali Beniamino Segre and of several other mathematicians who worked in Bologna in the century 1861 1960 are examined by different authors in some cases providing different view points Most contributions in the volume are historical they are reproductions of original documents or studies on an original work and its impact on later research The achievements of other mathematicians are investigated for their present day importance Computational Prospects of Infinity: Presented talks Chi-Tat Chong,2008 This volume is a collection of written versions of the talks given at the Workshop on Computational Prospects of Infinity held at the Institute for Mathematical Sciences from 18 June to 15 August 2005 It consists of contributions from many of the leading experts in recursion theory computability theory and set theory Topics covered include the structure theory of various notions of degrees of unsolvability algorithmic randomness reverse mathematics forcing large cardinals and inner model theory and many others **Algebraic Geometry and its**
