Segmentation And Recovery Of Superquadrics:

Segmentation and Recovery of Superquadrics Ales Jaklic, Ales Leonardis, F. Solina, 2013-04-17 A representation of objects by their parts is the dominant strategy for representing complex 3D objects in many disciplines. In computer vision and robotics, superquadrics are among the most widespread part models. Superquadrics are a family of parametric models that cover a wide variety of smoothly changing 3D symmetric shapes which are controlled with a small number of parameters and which can be augmented with the addition of global and local deformations. The book covers in depth the geometric properties of superquadrics. The main contribution of the book is an original approach to the recovery and segmentation of superquadrics from range images. Several applications of superquadrics in computer vision and robotics are thoroughly discussed and in particular the use of superquadrics for range image registration is demonstrated. Audience: The book is intended for readers of all levels who are familiar with and interested in computer vision issues. **Theoretical**

Foundations of Computer Vision Walter Kropatsch, Reinhard Klette, Franc Solina, R. Albrecht, 2012-12-06 Computer Vision is a rapidly growing field of research investigating computational and algorithmic issues associated with image acquisition, processing, and understanding. It serves tasks like manipulation, recognition, mobility, and communication in diverse application areas such as manufacturing, robotics, medicine, security, and virtual reality. This volume contains a selection of papers devoted to theoretical foundations of computer vision, covering a broad range of fields: e.g., motion analysis, discrete geometry, computational aspects of vision processes, models, morphology, invariance, image compression, 3D reconstruction of shape. Several issues have been identified to be of essential interest to the community: non-linear operators, the transition between continuous to discrete representations, a new calculus of non-orthogonal partially dependent systems. **Computer**

Analysis of Images and Patterns Wladyslaw Skarbek, 2003-06-30 Computer analysis of images and patterns is a scientific field of longstanding tradition with roots in the early years of the computer era when electronic brains inspired scientists. Moreover, the design of vision machines is a part of humanity's dream of the artificial person. I remember the 2nd CAIP held in Wismar in 1987. Lectures were read in German, English, and Russian, and proceedings were also only partially written in English. The conference took place under a different political system and proved that ideas are independent of political walls. A few years later the Berlin Wall collapsed, and Professors Sommer and Klette proposed a new formula for the CAIP: let it be held in Central and Eastern Europe every second year. There was a sense of solidarity with scientific communities in those countries that found themselves in a state of transition to a new economy. A well-implemented idea resulted in a chain of successful events in Dresden 1991, Budapest 1993, Prague 1995, Kiel 1997, and Ljubljana 1999. This year the conference was welcomed at Warsaw. There are three invited lectures and about 90 contributions written by more than 200 authors from 27 countries. Besides Poland, 60 authors, the largest representation comes from France, 23 followed by England, 16 Czech Republic, 11 Spain, 10 Germany, 9 and Belarus 9. Regrettably, in spite of free registration fees and free accommodation for

authors from former Soviet Union countries we received only one accepted paper from Russia

Pattern Recognition Luc Van Gool,2003-06-30 We are proud to present the DAGM 2002 proceedings which are the result of the efforts of many people First there are the many authors who have submitted so many excellent contributions We received more than 140 papers of which we could only accept about half in order not to overload the program Only about one in seven submitted papers could be delivered as an oral presentation for the same reason But it needs to be said that almost all submissions were of a really high quality This strong program could not have been put together without the support of the Program Committee They took their responsibility most seriously and we are very grateful for their reviewing work which certainly took more time than anticipated given the larger than usual number of submissions Our three invited speakers added a strong multidisciplinary component to the conference Dr Antonio Criminisi of Microsoft Research Redmond USA demonstrated how computer vision can literally bring a new dimension to the appreciation of art Prof Philippe Schyns Dept of Psychology Univ of Glasgow UK presented intriguing insights into the human perception of patterns e g the role of scale Complementary to this presentation Prof Manabu Tanifuji of the Brain Science Institute in Japan Riken discussed novel neurophysiological findings on how the brain deals with the recognition of objects and their parts
