Handbook of Geophysical Exploration Enders A. Robinson, 1984 **Seismic Inversion & Deconvolution** Enders A. Robinson, 1984 **Seismic Inversion and Deconvolution** Enders A. Robinson, 1984-06-01 This book presents the theoretical and applied foundations of seismic inversion and deconvolution in a unified mathematical framework The Kunetz and Gelfand Levitan inversion schemes are presented together with the associated computational method of dynamic deconvolution Nonlinear and time varying models of the reflection seismogram are developed together with the various approximations that reduce them to the time invariant convolution model which forms the basis of classical deconvolution *Seismic Inversion and Deconvolution* Enders A. Robinson, **Seismic Inversion & Deconvolution** Enders A. Robinson, 1984 **The Leading Edge** ,2006 The British Library General Catalogue of Printed Books, 1986 to 1987 British Library, 1988 Information-Based Inversion and Processing with Applications T.J. Ulrych, M.D. Sacchi, 2005-12-16 Information Based Inversion and Processing with Applications examines different classical and modern aspects of geophysical data processing and inversion with emphasis on the processing of seismic records in applied seismology Chapter 1 introduces basic concepts including probability theory expectation operator and ensemble statistics elementary principles of parameter estimation Fourier and z transform essentials and issues of orthogonality In Chapter 2 the linear treatment of time series is provided Particular attention is paid to Wold decomposition theorem and time series models AR MA and ARMA and their connection to seismic data analysis problems Chapter 3 introduces concepts of Information theory and contains a synopsis of those topics that are used throughout the book Examples are entropy conditional entropy Burg s maximum entropy spectral estimator and mutual information Chapter 4 provides a description of inverse problems first from a deterministic point of view then from a probabilistic one Chapter 5 deals with methods to improve the signal to noise ratio of seismic records Concepts from previous chapters are put in practice for designing prediction error filters for noise attenuation and high resolution Radon operators Chapter 6 deals with the topic of deconvolution and the inversion of acoustic impedance The first part discusses band limited extrapolation assuming a known wavelet and considers the issue of wavelet estimation The second part deals with sparse deconvolution using various entropy type norms Finally Chapter 7 introduces recent topics of interest to the authors The emphasis of this book is on applied seismology but researchers in the area of global seismology and geophysical signal processing and inversion will find material that is relevant to the ubiquitous problem of estimating complex models from a limited number of noisy observations Non conventional approaches to data processing and inversion are presented Important problems in the area of seismic resolution enhancement are discussed Contains research material that could inspire graduate students and their supervisors to undertake new research directions in applied seismology and geophysical signal processing Forthcoming Books Rose Arny, 1989 *Handbook of Geophysical Exploration* Enders A. Robinson, 1999
