Overcoming Barriers Craig Taylor, Elliott Mittler, Le Val Lund, 1998-01-01 Prepared by the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph studies seven large lifeline organizations that have undertaken significant seismic improvement programs In spite of often cited barriers to natural hazards risk reduction these organizations demonstrate a variety of ways to start and sustain risk reduction programs In these economically and politically robust organizations top level managers and high level inside technical seismic advocates learned from the damage done by past earthquakes to their systems or similar systems and from research and educational programs Then

each group developed an overall view of its system's earthquake vulnerabilities and devised adaptable incremental seismic implementation programs

Performance-Based Seismic Engineering: Vision for an Earthquake Resilient Society

Matej Fischinger, 2014-07-15 The Bled workshops have traditionally produced reference documents providing visions for the future development of earthquake engineering as foreseen by leading researchers in the field. The participants of the 2011 workshop built on the tradition of these events initiated by Professors Fajfar and Krawinkler to honor their important research contributions and have now produced a book providing answers to crucial questions in today's earthquake engineering. What visible changes in the design practice have been brought about by performance based seismic engineering? What are the critical needs for future advances? What actions should be taken to respond to those needs? The key answer is that research interests should go beyond the narrow technical aspects and that the seismic resilience of society as a whole should become an essential part of the planning and design process. The book aims to provide essential guidelines for researchers, professionals, and students in the field of earthquake engineering. It will also be of particular interest for all those working at insurance companies, governmental civil protection and emergency management agencies that are responsible for assessing and planning community resilience. The introductory chapter of the book is based on the keynote presentation given at the workshop by the late Professor Helmut Krawinkler. As such, the book includes Helmut's last and priceless address to the engineering community together with his vision and advice for the future development of performance based design earthquake engineering and seismic risk management.

Oil and Gas Pipelines R. Winston Revie, 2015-04-20

A comprehensive and detailed reference guide on the integrity and safety of oil and gas pipelines both onshore and offshore. Covers a wide variety of topics including design, pipe manufacture, pipeline welding, human factors, residual stresses, mechanical damage, fracture and corrosion protection, inspection and monitoring, pipeline cleaning, direct assessment, repair, risk management, and abandonment. Links modern and vintage practices to help integrity engineers better understand their system and apply up-to-date technology to older infrastructure. Includes case histories with examples of solutions to complex problems related to pipeline integrity. Includes chapters on stress based and strain based design, the latter being a novel type of design that has only recently been investigated by designer firms and regulators. Provides information to help those who are responsible to establish procedures for ensuring pipeline integrity and safety.
