speakers includes not only Fields Medallists and other established researchers but also many other younger and less well known mathematicians whose theorems are significant and whose work may become the next big thing in number theory

Tensor Categories Pavel Etingof, Shlomo Gelaki, Dmitri Nikshych, Victor Ostrik, 2016-08-05 Is there a vector space whose dimension is the golden ratio Of course not the golden ratio is not an integer But this can happen for generalizations of vector spaces objects of a tensor category The theory of tensor categories is a relatively new field of mathematics that generalizes the theory of group representations It has deep connections with many other fields including representation theory Hopf algebras operator algebras low dimensional topology in particular knot theory homotopy theory quantum mechanics and field theory quantum computation theory of motives etc This book gives a systematic introduction to this theory and a review of its applications While giving a detailed overview of general tensor categories it focuses especially on the theory of finite tensor categories and fusion categories in particular braided and modular ones and discusses the main results about them with proofs In particular it shows how the main properties of finite dimensional Hopf algebras may be derived from the theory of tensor categories Many important results are presented as a sequence of exercises which makes the book valuable for students and suitable for graduate courses Many applications connections to other areas additional results and references are discussed at the end of each chapter

Selecta Mathematica V Konrad Jacobs, 1979 *The Mathematical and Philosophical Legacy of Alexander Grothendieck* Marco Panza, Daniele C. Struppa, Jean-Jacques Szczeciniarz, 2025-01-21 Alexander Grothendieck is often considered one of the greatest mathematicians of the twentieth century if not all time and his unique vision continues to impact and inspire many fields and researchers today Utilizing a multidisciplinary approach this edited volume explores the profound influence his work and ideas have had not only on mathematics but also on logic and philosophy Chapters are written by international scholars and many were inspired by talks given at the conference Grothendieck A Multifarious Giant at Chapman University May 24 28 2022 Some chapters are written from a historical perspective and discuss the development of the main themes that characterized Grothendieck's work Others are more mathematical in nature analyzing and extending some of his more relevant and obscure results that are still not well understood Philosophical implications and applications in logic are the subjects of other chapters This volume will be of interest not only to mathematicians working in algebraic geometry category theory and other areas to which Grothendieck contributed but also to philosophers logicians and historians of science

Vertex Operator Algebras in Mathematics and Physics Stephen Berman, Vertex operator algebras are a class of algebras underlying a number of recent constructions results and themes in mathematics These algebras can be understood as string theoretic analogues of Lie algebras and of commutative associative algebras They play fundamental roles in some of the most active research areas in mathematics and physics Much recent progress in both physics and mathematics has benefited from cross pollination between the physical and mathematical points of view This book presents the proceedings from the workshop Vertex

Operator Algebras in Mathematics and Physics held at The Fields Institute It consists of papers based on many of the talks given at the conference by leading experts in the algebraic geometric and physical aspects of vertex operator algebra theory The book is suitable for graduate students and research mathematicians interested in the major themes and important developments on the frontier of research in vertex operator algebra theory and its applications in mathematics and physics

Lion Hunting & Other Mathematical Pursuits: A Collection of Mathematics, Verse and Stories Ralph P. Boas Jr., 2020-07-31 In the famous paper of 1938 A Contribution to the Mathematical Theory of Big Game Hunting written by Ralph Boas along with Frank Smithies using the pseudonym H P tard Boas describes sixteen methods for hunting a lion This marvelous collection of Boas memorabilia contains not only the original article but also several additional articles as late as 1985 giving many further methods But once you are through with lion hunting you can hunt through the remainder of the book to find numerous gems by and about this remarkable mathematician Not only will you find his biography of Bourbaki along with a description of his feud with the French mathematician but also you will find a lucid discussion of the mean value theorem There are anecdotes Boas told about many famous mathematicians along with a large collection of his mathematical verses You will find mathematical articles like a proof of the fundamental theorem of algebra and pedagogical articles giving Boas views on making mathematics intelligible

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programing is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut fur konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
