Unifying Systems Aarne Mämmelä,2025-04-29 Interdisciplinary systems thinking is complementary but does not replace conventional disciplinary analytical thinking The book is valuable for researchers their advisors and other thinkers interested in deep knowledge of science Interdisciplinary systems thinking is valuable for three reasons The goal of all science is a unified view of the world we cannot solve the significant problems of our time without interdisciplinary collaboration and general theories of systems and system archetypes support the solution to those problems System archetypes are generic system models that have stood the test of time As specialists within a discipline we must be able to communicate between disciplines Interdisciplinary generalists can offer us reliable visions and relevant research problems

The goal of interdisciplinary research is to find unified solutions to those problems The book provides a lot of information from over a thousand sources in a structured manner to help the reader The book includes a comprehensive chronology vocabulary and bibliography The author has been a research professor in information engineering for over 25 years During his career he became interested in systems thinking which is closely related to the philosophy and history of science

Systems Theory for Engineering Practice Maosheng Zheng,Jie Yu,2024-12-02 This book presents cognition of the universality of systems theory thinking by using some ordinary physical phenomena and their methods in study of which the involved treatments are consistent with the viewpoint of systems theory It contains the collective actions of classical vibration of many bodies and wave the extreme value problem in natural world status of electrons in atom molecule and metals Ising model in phase transition and elementary excitation in solid multi objective optimization in a system description of effective media approximation certainty in uncertain phenomena all these reflect the cooperative synergetic effects wholeness of group actions unity of opposites inside a system and collective phenomena in a system completely The relevant methodologies for systems theory are organic combination and synergism of both reductionism and holism instead of confrontation or separation of them which could be used in dealing with analogous problems in systems science and engineering fields in response to the idiom of stones from other hills being good for polishing this jade and comprehend by analogy so as to promote the transformation of wisdom to productivity The authors wish this work could play its role as a paving stone to serve the research and application of systems theory This book can be used as a textbook for postgraduate and advanced undergraduate students in relevant majors and a reference book for scientists and practitioners in related fields

Essentials of the Dynamic Universe Theodore Peck Snow,1987-02-01 *A Theory of Creative Thinking* Kekang He,2017-06-13 This book examines research on creative thinking both current and historical It explores two dimensions of human thought time and space and two modes of thinking conscious and unconscious as well as both left and right brain functions and artistic and scientific creative activities The book proposes a Double Circulation model of creative thinking and argues that imagery thinking intuitive thinking and logical thinking are main parts of creative thinking and that dialectical thinking and horizontal vertical thinking are the guides for highly complex problem solving thoughts and strategies The book focuses on education and psychology and also covers how to use ICT to promote students creative thinking skills Researchers will benefit from the Double Circulation model which provides a new perspective on conducting creative thinking research The book is also a valuable resource for graduate students in the fields of educational technology and psychology and for all readers who are interested in creative thinking

The Global Enabling Trade Report 2008 ,2008 *A New Kind of Computational Biology* Parimal Pal Chaudhuri,Soumyabrata Ghosh,Adip Dutta,Somshubhro Pal Choudhury,2018-09-26 This book reflects more than three decades of research on Cellular Automata CA and nearly a decade of work on the application of CA to model biological strings which forms the foundation of A New Kind of Computational Biology pioneered by the start up

CARLBio After a brief introduction on Cellular Automata CA theory and functional biology it reports on the modeling of basic biological strings with CA starting with the basic nucleotides leading to codon and anti codon CA models It derives a more involved CA model of DNA RNA the entire translation process for amino acid formation and the evolution of protein to its unique structure and function In subsequent chapters the interaction of Proteins with other bio molecules is also modeled The only prior knowledge assumed necessary is an undergraduate knowledge of computer programming and biology The book adopts a hands on do it yourself approach to enable readers to apply the method provided to derive the CA rules and comprehend how these are related to the physical rules observed in biology In a single framework the authors have presented two branches of science Computation and Biology Instead of rigorous molecular dynamics modeling which the authors describe as a Bottoms Up model or relying on the Top Down new age Artificial Intelligence AI and Machine Language ML that depends on extensive availability of quality data this book takes the best from both the Top Down and Bottoms up approaches and establishes how the behavior of complex molecules is represented in CA The CA rules are derived from the basic knowledge of molecular interaction and construction observed in biological world but mapped to a few subset of known results to derive and predict results This book is useful for students researchers and industry practitioners who want to explore modeling and simulation of the physical world complex systems from a different perspective It raises the inevitable the question Are life and the universe nothing but a collection of continuous systems processing information

Practical Spirituality and Human Development Ananta Kumar Giri,2018-09-28 This book explores varieties of spiritual movements and alternative experiments for generation of beauty dignity and dialogues in a world where the rise of the religious in politics and the public sphere is often accompanied by violence It examines how spirituality can contribute to human development social transformations and planetary realizations urging us to treat each other and our planet with evolutionary care and respect Trans disciplinary and trans paradigmatic to its very core this text opens new pathways of practical spirituality and humanistic action for both scholarship and discourse and offers an invaluable companion for scholars across religious studies cultural studies and development studies
