Ming-Hui Chen, Peter Müller, Dongchu Sun, Keying Ye, Dipak K. Dey, 2010-07-24 Research in Bayesian analysis and statistical decision theory is rapidly expanding and diversifying making it increasingly more difficult for any single researcher to stay up to date on all current research frontiers This book provides a review of current research challenges and opportunities While the book can not exhaustively cover all current research areas it does include some exemplary discussion of most research frontiers Topics include objective Bayesian inference shrinkage estimation and other decision based estimation model selection and testing nonparametric Bayes the interface of Bayesian and frequentist inference data mining and machine learning methods for categorical and spatio temporal data analysis and posterior simulation methods Several major application areas are covered computer models Bayesian clinical trial design epidemiology phylogenetics bioinformatics climate modeling and applications in political science finance and marketing As a review of current research in Bayesian analysis the book presents a balance between theory and applications The lack of a clear demarcation between theoretical and applied research is a reflection of the highly interdisciplinary and often applied nature of research in Bayesian statistics The book is intended as an update for researchers in Bayesian statistics including non statisticians who make use of Bayesian inference to address substantive research questions in other fields It would also be useful for graduate students and research scholars in statistics or biostatistics who wish to acquaint themselves with current research frontiers NASA/MSFC FY91 Global Scale Atmospheric Processes Research Program Review Fred W. Microwave Radiometry and Remote Sensing of the Earth's Surface and Atmosphere P. Pampaloni, S. Paloscia, 2023-06-14 This book contains a selection of refereed papers presented at the 6 Specialist Meeting on Microwave Radiometry and Remote Sensing of the Environment held in Florence Italy on March 15 18 1999 Over the last two decades passive microwave remote sensing has made considerable progress and has achieved significant results in the study of the Earth's surface and atmosphere Many years of observations with ground based and satellite borne sensors have made an important contribution to improving our knowledge of many geophysical processes of the Earth's environment and of global changes The evolution in microwave radiometers aboard satellites has increased steadily over recent years At the same time many investigations have been carried out both to improve the algorithms for the retrieval of geophysical parameters and to develop new technologies The book is divided into four main sections three of these are devoted to the observation of the Earth's surface and atmosphere and the fourth to future missions and new technologies The first section deals with the study of sea and land surfaces and reports recent advances in remote sensing of

ocean wind sea ice soil moisture and vegetation biomass including electromagnetic modelling and the assimilation of radiometric data in models of land surface processes The following two sections are devoted to the measurement of atmospheric quantities which are of fundamental importance in climatology and meteorology and since they influence radio wave propagation they also impact on several other fields including geodesy navigational satellite and radioastronomy The last section presents an overview of new technologies and plans for future missions Education and Training in Japan
