Reactions of Antibodies with Soluble Antigens Curtis A. Williams, Merrill W. Chase, 2014-05-10 Methods in Immunology and Immunochemistry Volume III Reactions of Antibodies with Soluble Antigens provides information pertinent to antigen antibody and hapten antibody reactions in vitro in free solution and in gels This book presents the development of research in immunology and immunochemistry Organized into three chapters this volume begins with an overview of protein antiprotein reactions This text then discusses the inhibitory activity of protein fragments which suggested that antigenic combining sites of proteins were limited regions of the whole antigen molecule Other chapters consider the measurement of inhibitory activity which is still the principal assay to characterize antigenic sites of proteins This book discusses as well the immunological techniques prior to the development of gel diffusion methods The final chapter deals with fluorescence labeling techniques that provide powerful approaches for exploring the thermodynamic and kinetic parameters of antigen antibody interactions This book is a valuable resource for mathematicians and immunologists

Antigen-Antibody Reactions In Vivo Curtis A. Williams, Merrill W. Chase, 2014-05-10 Methods in Immunology and Immunochemistry Volume V Antigen Antibody Reactions In Vivo deals primarily with immune phenomena in tissues or in cell preparations This book covers a variety of topics including anaphylaxis tolerance immune suppression with chemical agents radiation effects antibody synthesis in vitro immunological methods and applied electron microscopy Organized into 10 chapters this volume begins with an overview of systemic anaphylaxis investigations in other more resistant species This text then presents the analysis of mechanisms involved in the pathogenesis of the Arthus phenomenon which shed light on the understanding of other lesions of hypersensitivity Other chapters consider the effects of antigen antibody interaction on connective tissue This book discusses as well the degree and duration of acquired tolerance The final chapter deals with the application of electron microscopy in the elucidation of the mechanisms of immune reactions

Chase,2014-05-12 *Methods in Immunology Volume II Physical and Chemical Methods* is a collection of papers dealing with electrophoresis analytical ultracentrifugation dialysis ultrafiltration cellulose ion exchangers and chromatographic separation of macromolecules on porous gels Some papers explain the applications of radioisotopes optical analysis and chemical analysis of proteins carbohydrates lipids and nucleic acid One paper describes the theory of electro migration Factors such as electrical charge or frictional coefficients govern the rate of migration of charged particles in an electric field The differences found in their velocities can be used to separate substances or analyze them Mobility is a characteristic property of molecules and can also be influenced by the composition of the medium or solution Dialysis separates solvents too large to diffuse through a barrier from smaller solutes ultrafiltration reverse osmosis forces solvent and solutes up to a certain critical size through the barrier by a high pressure on one side The book notes that the membrane never becomes plugged in dialysis because of some opposite movement of the solvent Another paper points out that the significance of radioactive tracers in immunochemistry employed to identify and label macromolecules functioning as antigens and antibodies The collection can prove valuable to bio chemists cellular biologists micro biologists developmental biologists and scientists involved in immunological research *Methods in Immunology and Immunochemistry* Curtis Alvin Williams,1977 **Structural Concepts in Immunology and Immunochemistry** Elvin Abraham Kabat,1976 **Methods in Immunology and Immunochemistry (majalah).** Curtis Alvin Williams,Merrill W.
